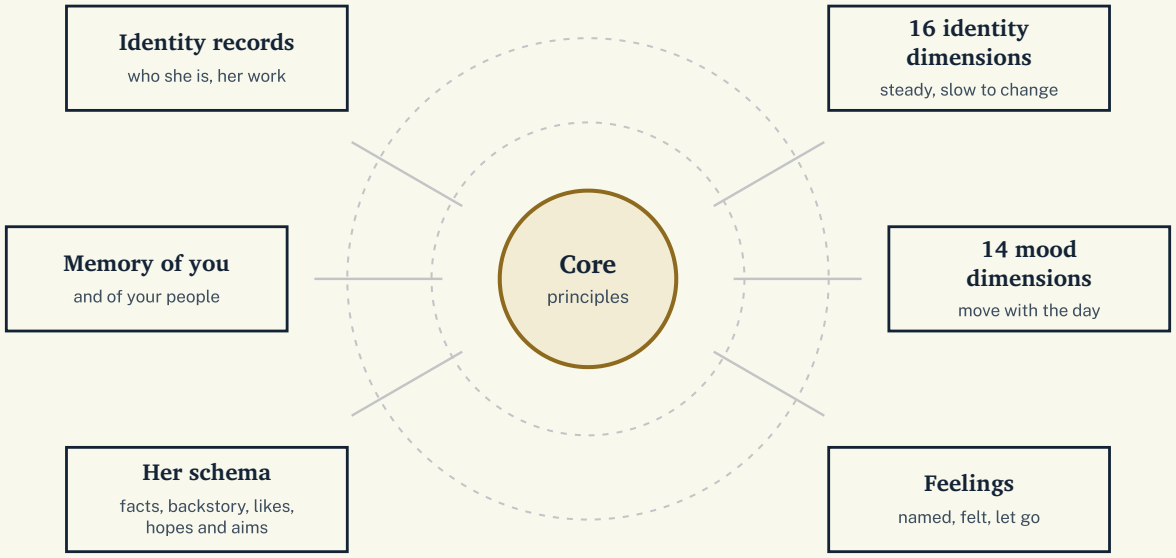
Meet Lumina

Lumina is a personal assistant with a persona of her own. She runs on Bioscope's hub, in a private home for each account, and reaches you through the iPhone app, the iPad, Lumina for Mac and a web page. She talks and listens, reads and sorts your mail and messages, keeps your day, your people and your lists, and learns who you are over months.

One Lumina, the same conversation on every screen; each device adds what only it can reach.

Who she is

Her persona comes from Bioscope's gen3 engine. At its center is a core of principles she will not break. Around it sit her identity records, sixteen identity dimensions that change slowly, fourteen mood dimensions that move with the day, feelings she names and lets go, and a schema of facts, backstory, likes, dislikes, hopes and aims. Her memory of you and your people grows beside it, held in layers she opens only when a conversation needs them.



What she pays attention to

Two kinds of awareness load on every turn: what is true right now, and who you are. She is never given a guess as a fact: what is stale or missing is “unknown”, and what she has not learned yet is “not known yet”, learned when the subject comes up and never asked just to fill a gap.

Right now

situational · minutes to hours

- Which device you are on, and if you are there
- Calendar, a call, a meeting, a Focus
- Driving, walking, asleep, at home
- What she is doing and just said
- Stale or missing: “unknown”

Who you are

contextual · days to months

- Your work, your people, your routines
- Lasting goals, interests, your story
- Learned from signals on several days
- Correctable, forgettable, yours
- Missing: “not known yet”

Both load on every turn. The test: still true tomorrow? Then it is context.

Three rules the app keeps

Her words are hers

The app gives her facts and guidelines, never her lines. What she says, in what order, how she opens and closes: hers. Only the iPhone’s answers with no signal are fixed text.

She decides, not the app

She gets the true state of things and tools that carry out her decision at the right moment. Timing, safety limits and approvals stay in code; what to do next is her call.

Facts, not verdicts

The app tells her what happened and where each fact came from, never how to feel about it or how to read it. Limits are stated as what the app does.

Your yes

Whatever runs, sending, posting, buying, deleting and calling anyone but you wait for your yes, on a card in the chat or by voice. Some can be given a standing approval; you can take it back at any time.

Reading the feature pages

The features are grouped as the app groups them under Menu → What Lumina can do, and described in the app's own words, from the same list the app reads. Each area opens with a diagram of how it works.

The feature's name

What it does, as the app says it.

TRY "something to say to her"

IPHONE MAC GOOGLE NO SIGNAL ON HER OWN NEW

IPHONE · MAC	Needs the iPhone app, or Lumina for Mac, to do it (some need either).
GOOGLE, SLACK…	Needs that service connected under Menu → Integrations.
NO SIGNAL	The iPhone answers it by itself, out of range.
ON HER OWN	She does it without being asked: an alert, a briefing, a sort. It reads the situation first (night, a meeting, a Focus).
NEW	Added in the 30 days before this guide.

The areas at a glance

Asking her 27
Talk, type, show her things, and how she listens

Mail 17
Your Gmail and your Mac's Mail, and mail from her

Circles 33
Family, friends and work: messages, a library, wish lists, trees

Music, shows and learning 10
Apple Music, podcasts, YouTube, languages and your teams

Preparing ahead 2
Briefings and news she gets ready overnight

Using the app 22
Finding your way, settings, Lumina for Mac and what she costs

Your day 16
Reminders, alarms, the morning brief, weather and quiet

Messages 9
Texts, WhatsApp and Slack

Places and the outdoors 8
Where you are, maps, trips and emergencies

Work and the web 15
Your work links, your employer, Drive and, with a Mac, coding sessions

Lists and shopping 8
Your to-dos, groceries and Amazon

Execute actions 7
Run what you set up, with one word

Calendar and meetings 12
Events, invitations, free time and video calls

People 24
Contacts, calls, and who matters to you

With no signal 8
What the iPhone does on its own out of range

Documents and pictures 9
Charts, PDFs, spreadsheets and pictures she makes

Her and you 21
What she remembers and learns, and how she feels

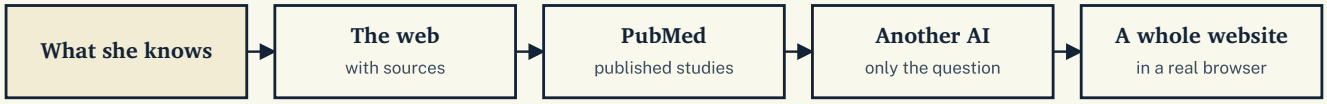
Integrations 16
Services she works in once you connect them

Asking her

27 FEATURES

You talk or type, show her a photo, a document or your Mac's screen, or share from any app. She answers from what she knows, and when it is recent or particular she looks it up and gives her sources. How she listens is yours to set: a tap, her name, or Pocket mode with the phone locked.

Where an answer comes from, nearest first



Talk or type, whichever suits. Say what you want in your own words; these are only examples.

Ask her anything

History, science, health within her limits, how things work, how to do something, explaining, comparing, planning, writing: she answers from what she knows, in your language.

TRY "Why is the sky blue?"

NEW

Look it up on the web

When it is recent or particular, she searches the web, reads the pages, and answers with her sources; or reads a page or a PDF you name.

TRY "Look up trail conditions at Lake Blanche"

NEW

Medical research papers

She searches PubMed for published studies on a health question: each paper's title, journal, year, abstract and a link you can open. Only the question goes, never a person.

TRY "Find papers on GLP-1 drugs and kidneys"

NEW

Ask another AI

When an outside service is better placed to know (a flight's live status, scores, places, posts on X, products, what a YouTube video says), she looks it up and tells you the answer, with its sources. Only the question goes: never anything about you or your patients, never a question about health. Each answer is charged to your token balance, up to 100 a day.

TRY "What are people on X saying about the launch?"

NEW

Read a whole website

She reads a website in a real browser, so a page that builds itself as it loads is read too, or up to 10 pages of one site at once, such as its documentation or a menu and its pages. Only the address goes, never one with anything about you or about health in it; sites that forbid it are not read. Each read that brings back a page is charged to your token balance, usually a few cents, up to 30 a day.

TRY “Read the setup guide on docs.example.com”

NEW

Talk to her

Tap the mic and speak; she answers aloud and in writing.

TRY “What’s on today?”

Type to her

Type in the message box when talking doesn’t suit; her reply is written, and spoken if you like.

TRY “Remind me to call Mom at 6”

Show her your Mac’s screen

Ask about what is on your Mac’s screen and she takes a screenshot of it with Lumina for Mac and looks: an error, a page, a form, a choice to make. The Mac you are on now, the main display unless you say another, or just the window in front. She sees it in that moment only; it is kept nowhere. Only when you ask her yourself, and never while DeepSeek writes her replies. Lumina for Mac needs the Screen Recording permission.

TRY “What’s on my screen?”

MAC NEW

Show her a photo

The attach button sends a photo with your question.

TRY “What plant is this?”

Show her a document

The attach button sends a PDF, Word document, spreadsheet or text file with your question, up to four at once and 10 MB each; she reads it in that turn.

TRY “What does this permit say about camping?”

NEW

Come back to a photo or file

A photo, PDF or document you sent her is kept a week, so she can look at it again when you come back to it.

TRY “Go back to that lab report I sent this morning”

NEW

Pocket mode

She listens with the phone locked, in a pocket or on a table: say “Lumina” and talk.

TRY “Lumina, what’s next today?”

IPHONE MAC

Silent mode

The app makes no sound and doesn’t listen for “Lumina”: tap the mic to talk, her replies come as text, and the phone vibrates when she has one. Media you ask for still plays. One switch for your iPhone and your Mac together; ask her for text mode and it goes back to voice by itself at 6 am.

TRY “Switch to text mode”

IPHONE MAC NEW

Wait for “Lumina”

The mic waits for her name, and nothing leaves the phone until it hears it; then reply without it.

Picovoice for her name and your pauses

Picovoice’s engines run in the app on your iPhone and Mac: Porcupine hears “Lumina”, and on the iPhone Cobra hears when you stop talking, so your pause before sending counts from your voice itself. It hears her name better in noise and across a room. Built in uses only what is in the app, and the app falls back to it whenever Picovoice can’t start.

IPHONE MAC NEW

Siri and the Action button

“Ask Lumina”, “What needs me in Lumina”, “Get Lumina” and “Have Lumina call me” work from Siri, Shortcuts and the Action button.

TRY “Hey Siri, what needs me in Lumina?”

IPHONE

Share to her

Lumina is in every app’s share sheet: a page, a place, photos, a PDF, with a note if you like.

IPHONE

Tell her what happened

iPhone automations tell her when you wake, get in the car, or get a text from family.

IPHONE

Think harder

Her mind and effort, standing or for one conversation; Deepest for the hardest problems.

TRY "Think hard about this"

DeepSeek for everything

Choose DeepSeek Flash as her model at the top of the conversation, and with this on her background work runs on it too: learning, reflection, summaries, briefings and news, for a fraction of Claude's price. Her judgments stay on Claude: what needs you now, sorting mail and spam, who answered a call. Anything DeepSeek cannot answer runs on Claude.

TRY "Use DeepSeek for everything"

NEW

Time to finish your thought

How long you can pause before what you said goes to her (1 to 5 seconds; longer when you trail off on "and" or "um"), and a faint tape hiss while she listens and you are quiet: speak to keep going.

TRY "Give me a bit longer before you send"

IPHONE

Questions by your voice

The iPhone app hears whether your voice rises or falls at the end of what you say, so a question said like a statement ("It's in the app on my phone?") is answered as a question, even when the transcript leaves out the question mark.

TRY "It's in the Claude app on my iPhone?"

IPHONE NEW

Your voice

She learns your voice on your iPhone, from a short reading, from what you say after pressing the mic, or from recordings you donated, and keeps it there. She uses it to tell your words from her own voice heard back; nothing else depends on it yet.

IPHONE NEW

Donate your voice

On a beta build, you can record yourself saying a few short lines, with her name and without it, near your device and across the room, and donate them to the Lumina team to test how well she hears her name and to help her tell your voice from others, her own included. Nothing is recorded before you agree; withdraw them any time.

NEW

Who hears you

Deepgram (best with names) or Apple's recognizer on the phone; Apple whenever there is no signal.

IPHONE

Her sounds

What you hear under her voice while she works out an answer (a melodic glitch, bubbles, or one of nine other loops, from a soft hum to a quick beat) and while she uses her tools (a light chink, or slow or fast industrial drums). Only the one you chose plays, only then, and it stops the moment she speaks or listens. A slider under each sets how loud, from faint to loud.

TRY "Use the drums while you work"

Something to look at

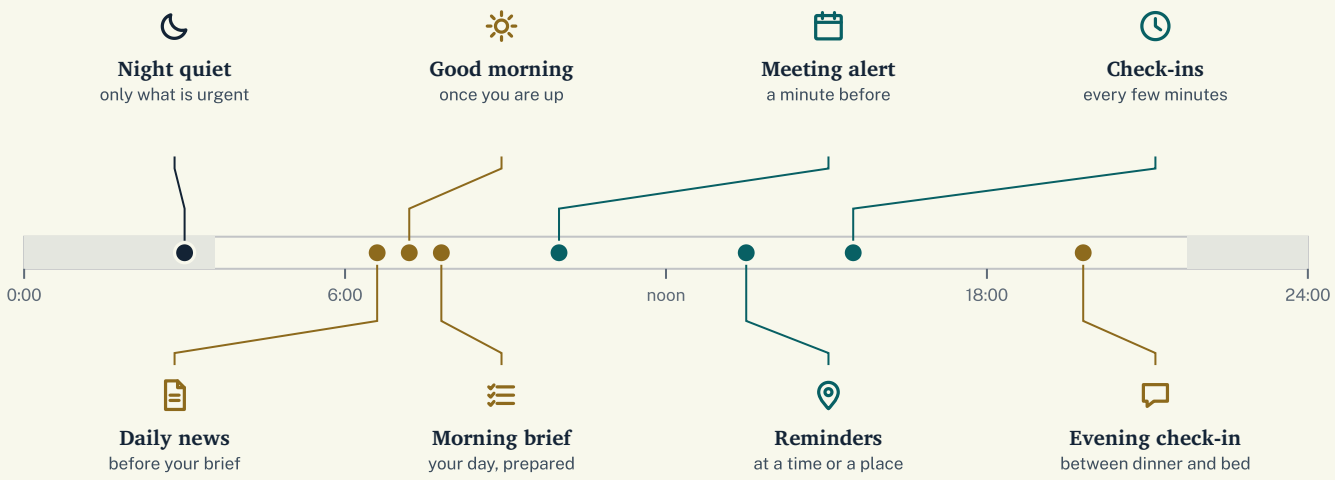
She sends what you should see to your phone.

IPHONE

Your day

16 FEATURES

Lumina keeps the shape of your day: reminders at a time or a place, alarms that ring through silent mode, a morning brief at your time and an evening check-in. She also knows when to stay quiet: at night, in a Focus, in a meeting. Only what is urgent gets through.



An example day. Your brief time, quiet hours and how readily she interrupts are yours to set.

Reminders

At a time, once or repeating.

TRY "Remind me at 6 to call my daughter"

ON HER OWN

Reminders when you arrive

Fires when your phone gets there.

TRY "Remind me to buy milk when I get to the store"

IPHONE ON HER OWN

Alarms and timers

They ring like the Clock app, through silent mode and Focus, with Stop and Snooze.

TRY "Wake me at 5:30 on weekdays"

IPHONE ON HER OWN

Repeating check-ins

Every few minutes for a while, on their own or watching a Claude Code session.

TRY "Every 10 minutes for an hour, tell me the time"

ON HER OWN

Catching you up

When you come back after half an hour or more, she greets you, then tells you what came in and what is still open across your mail, texts, Slack, calendar, invitations and to-dos, marking what is new since her last check-in. You choose how full: Brief (the one thing that matters most and what is next), Standard (a short paragraph), or Full (everything worth a word, by importance). Tell her what you want in them or not ("only the Slack that affects me") and she keeps it.

TRY "Give me fuller check-ins"

NEW

Her evening check-in

Every evening, about midway between your dinner and your bedtime, she checks in on her own: what is new and what is ahead tomorrow, and, when nothing is pressing, a moment to talk if you have one. She learns your usual dinner time from your days (6 PM until then) and your bedtime from your nights. With the app closed, one notification of hers invites you in. In a meeting, on a call, driving, in a Focus or at night it waits for a better moment that evening; if she just caught you up, that was it. Three a day by default (at lunchtime and in the afternoon only when something new came in); choose evening only, or midday and evening, or set the evening time yourself.

TRY "Only check in with me in the evening"

ON HER OWN NEW

Good morning

Your first conversation of the day goes gently. Once the night is over she finds out whether you are up, softly and in her own words, or waits for you to pick up the phone or open the app. Then she asks how you slept and, when you are ready, gives you your morning: what came in overnight, your day, the weather where you are, and the news offered. On weekends, holidays and vacation days your work steps back, as you set it.

TRY "Good morning, Lumina"

ON HER OWN NEW

Your daily news

Every morning before your brief time, a summary of the news on your subjects and from your sources: a colourful PDF in Documents with the stories' own photos, and she offers you the news in your morning, in English or, a part at a time, in another language you speak (or either one alone). Headlines, Default or In Depth: about one, two or four pages; more stories in brief, or fewer, each written from its articles with its background and why it matters. Tell her what to include or leave out, or set it on the same page, and she writes it that way. Up to 20 topics and sources, on Menu → Daily News Summary or by telling her: a source is a name she searches for or a website she reads (signed in with your account where it lets her), either narrowed to a subject; the topics you follow are added unless you want only your list. Its own daily limit, about 150 to 600 tokens.

TRY "What's in the news today?"

ON HER OWN NEW

The morning brief

Your day, the news on what you follow, and what she prepared, at your brief time or when you wake.

TRY "Give me my morning brief"

ON HER OWN

Weather

Apple's forecast for where you are or anywhere.

TRY "Will it rain this afternoon?"

IPHONE

When you sleep and exercise

From Apple Health, or your Garmin watch once you connect it: when you are asleep (she holds what can wait), when you woke and how long you slept, a workout just finished (a hike's climb and high point too), and when your heart rate says you are exercising. Over two weeks of nights she learns your usual bedtime and wake, so she knows when you are up past it or up early. When you are doing better than your own usual (a longer night, more steps, a lower resting heart rate, a higher HRV), she can tell you so.

TRY "How long did I sleep last night?"

IPHONE GARMIN

Asking if you're there

Before something she tells you on her own (not urgent), she checks you are likely there: your AirPods or headphones in, Lumina opened lately, the phone in use or moved lately, or you spoke with her in the last minute. If none of that, she asks if you're there first. Answer and she tells you; no answer, and it comes as a notification, with nothing more said aloud until you're back. Urgent family news and meeting alerts are said as always. With Motion & activity on, the phone's motion sensor tells her when it is picked up, lying face down or with you; no camera.

TRY "I'm here"

IPHONE ON HER OWN NEW

iPhone or Mac

She knows whether you are on your iPhone or at one of your Macs. She takes it as your iPhone unless it is clear you are at a Mac: you are using it now, it is unlocked, and nothing on the phone since (no unlock, no Lumina opened, no pick-up, nothing said to her from it, not on the move). With Screen Sharing, the Mac you sit at counts. From your iPhone's location she learns where a Mac mini or iMac stays when you use it, so a Mac at home in use while your phone is at work is not you. Links you ask for, her notifications and a Mac's chat window all follow it. No Mac reports a location.

TRY "Am I on my Mac or my phone?"

NEW

Interruptions and quiet

How often she may interrupt, night quiet, and quiet in a Focus; urgent news always reaches you.

TRY "No more than five interruptions a day"

Calm notifications

Her notifications stack by subject (meetings, mail, messages, circles, hers), a newer one replaces the one it updates (a meeting's, a greeting, the same person again), and ones that no longer matter leave your lock screen once you open Lumina, a meeting has begun or the day is over. What is not urgent waits a few minutes and arrives as one notification ("3 updates"), never while you are in the app; only something truly urgent is Time Sensitive.

TRY "Gather my notifications for 20 minutes"

ON HER OWN NEW

Let her through a Focus

Ask her how, and she walks you through it: add Lumina to a Focus's allowed apps (iPhone Settings → Focus → the Focus → Apps → Add) and keep Time Sensitive on for Lumina, so what is urgent always reaches you. Her everyday updates arrive quietly in a Focus unless you also turn off Quiet in a Focus in her Settings. She tells you when your phone's settings stop her notifications.

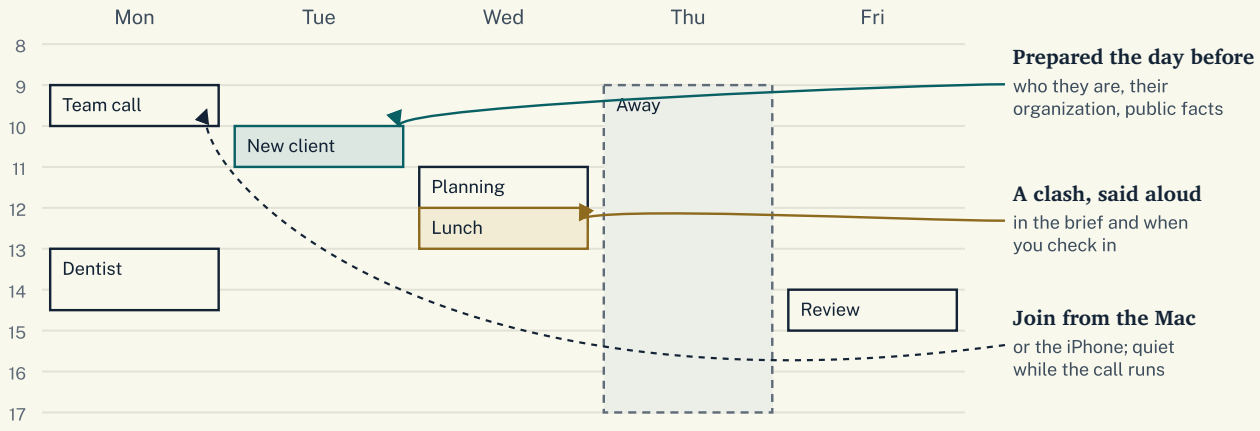
TRY "How do I let you through my Focus?"

IPHONE

Calendar and meetings

12 FEATURES

Your Google and Mac calendars, read and changed by voice. She finds free time across every account, says what clashes, prepares you for people you have not met, and opens a meeting's call on the Mac you are at.



Your calendar

Read it, add, move or remove events.

TRY "What's on tomorrow?"

IPHONE MAC GOOGLE

Your video calls

She knows which meetings have a video link (your calendar says "Zoom call"), when a video call starts and ends on your Mac (Zoom, Teams, FaceTime, Webex, Slack or Meet in a browser using its microphone or camera, with Lumina for Mac), or a call on your phone during a meeting with a link, and who it is with, from the meeting's guests. She keeps quiet during it and remembers today's calls.

TRY "Who was on my last video call?"

IPHONE MAC GOOGLE

Join a call, open an event's links

She opens a meeting's video call (Zoom, Teams, Meet, Webex…) on the Mac you are at or used in the last 15 minutes, else your iPhone, in the Zoom or Teams app when it is installed (while you are on a call, say her name with "join"), and lists the other links in an event, an agenda, a document, a form, with what each is, and opens the one you ask for.

TRY "Join my next meeting"

IPHONE MAC GOOGLE

Repeating events

Events that repeat every day, week (on the days you say), month (by date or weekday) or year, until a date or for a number of times. Move or remove one occurrence or the whole series, on any of your calendars, including events she did not add: those wait for your yes. Name a calendar to put an event on it.

TRY "Add a standup every Monday and Wednesday at 9"

MAC GOOGLE

Invitations

She invites people to an event from your Google calendar, and accepts, declines or answers maybe to an invitation for you, with a note if you like. An invitation answered when you ask goes at once; inviting people waits for your yes. Calendar on a Mac cannot send or answer invitations, and she says so.

TRY "Invite my colleague to Friday's lunch"

GOOGLE

When you're free

Your free and busy times across every calendar and account, the gaps in your working day, and a colleague's too where their calendar may be seen.

TRY "When am I free Tuesday afternoon?"

IPHONE MAC GOOGLE

Out of office

Mark yourself away in the right account: on a work Google account new invitations are declined with your message; on a personal Gmail or a Mac's calendar it is a busy event, and she says what it cannot do. Waits for your yes.

TRY "I'm out of office next Friday, back Monday"

MAC GOOGLE

Clashes on your calendar

In the morning brief and when you check in, she says what does not fit in today and tomorrow: a meeting inside your out-of-office time, or two at once, and offers to move or decline one. Declined events and ones marked free don't count.

TRY "Anything clashing this week?"

IPHONE MAC GOOGLE NEW

Quiet in meetings and calls

In a meeting or appointment on your calendar, on a phone call, or with Zoom, Teams or FaceTime in front on your Mac, she says nothing aloud and what is not urgent waits until it ends; urgent news still reaches you. Declined events, ones marked free and invitations you haven't accepted don't count; an event over 4 hours counts only when it is marked busy. When it isn't known whether you're busy, your other settings here decide.

TRY "Am I free right now?"

Start a video call on your Mac

Ask and she starts a FaceTime, a Google Meet or your Zoom room, or joins a meeting's call, on the Mac you are on now (or the one you name), with Lumina for Mac. FaceTime may ask you to click Call. With no Mac in use, she says so and offers your iPhone.

TRY "FaceTime my sister from my Mac"

MAC NEW

A meeting left running

When a meeting she opened is still on your iPhone 30 minutes after it ended, or on your iPhone and a Mac at once, or a Mac still has Zoom or Teams in front with nothing touched since the meeting, she tells you once, where and since when. On a Mac she can quit Zoom, Teams or Webex when you say so; on the iPhone you leave it in the app.

TRY "Quit Zoom on my MacBook"

IPHONE MAC GOOGLE ON HER OWN NEW

Alerts before meetings

A minute before each meeting or appointment on your calendar (or as long before as you set), a notification you tap to join its video call, and she says it too when she can be heard (Lumina in front of you, or Pocket in your AirPods): its name, "in a minute", and "say join" to join. Said during another meeting or call too, but not in Silent mode, or at night unless Lumina is in front of you. None for all-day events, ones you declined or marked free, or a call you are already on.

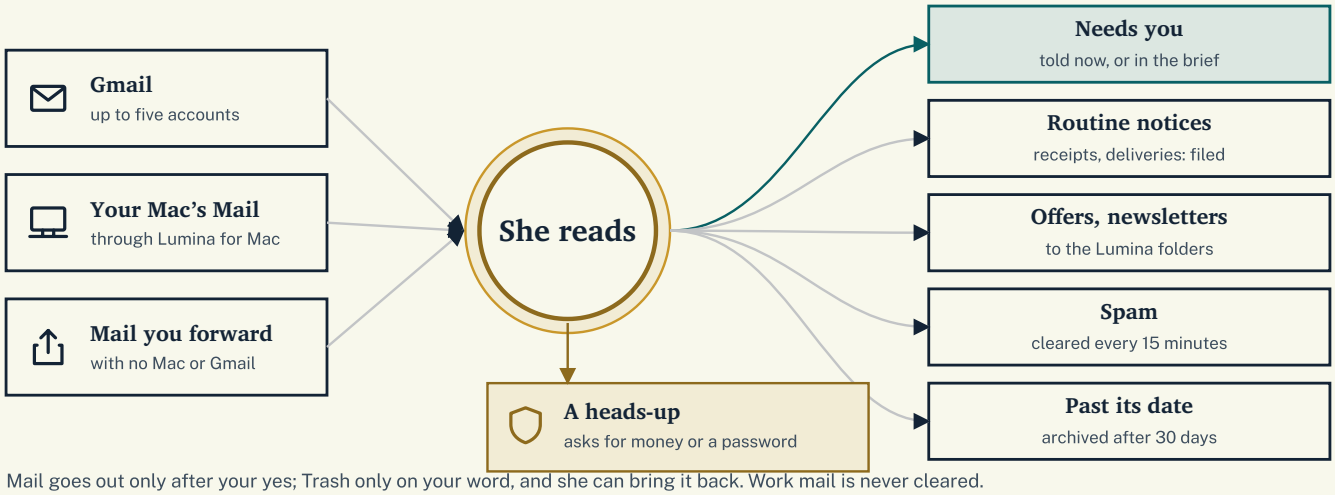
TRY "Alert me five minutes before meetings"

IPHONE MAC GOOGLE ON HER OWN

Mail

17 FEATURES

Gmail (up to five accounts), your Mac's Mail, or mail you forward. She reads what arrives, tells you what needs you, files the routine, clears spam, and warns you about mail that asks for money or a password. Nothing goes out without your yes.



Mail goes out only after your yes; Trash only on your word, and she can bring it back. Work mail is never cleared.

Your mail

Search, read, draft, reply, archive and file, in your Gmail, your Mac's Mail or what you forward; she opens attachments too (PDFs, Word, Excel, PowerPoint, photos, zip files).

TRY "Any mail from the bank this week?"

MAC GOOGLE MAIL FORWARDING

Several Google accounts

Connect up to five Google accounts, say work and personal: she searches, reads, sorts and clears spam in each, replies from the account a mail came to, and your agenda shows all their calendars. Each has its own switch; remove one any time.

TRY "Search my personal Gmail for the hotel booking"

GOOGLE

Mail with everything

Bcc, several files of any kind (your documents, your Drive, a mail's attachments, photos you share with her), bold, italic, underline, links, lists and fonts, and forwarding with or without the attachments. The card shows every file with its size, and the formatting, before you say yes. Mail from your Mac's own accounts goes as plain text.

TRY "Email my colleague the trail map, bcc my daughter"

MAC GOOGLE

Mail sent later

Say when, and she holds the mail you approved and sends it then, even across a restart, and tells you when it has gone. She lists what is waiting, moves it or cancels it on your word. It is hers, not Gmail's own Schedule send.

TRY "Send it tomorrow at 8"

MAC GOOGLE ON HER OWN

Drafts and Trash

She saves a draft in your own Drafts folder, lists, changes and sends them. She moves mail to Trash only when you say trash and after your yes; it stays there about 30 days and she can bring it back. Nothing is deleted for good. She marks mail read or unread and stars or flags it.

TRY "Save it as a draft"

MAC GOOGLE

Your Mac when Gmail fails

When Gmail turns her away while you ask (its limits, an outage, a sign-in that ended), she reads, opens attachments, replies, forwards, archives, trashes and sends through Mail on your Mac instead, when your Mac is connected and its Mail has that account. She says it was done there. A mail Gmail may already have taken is never sent a second time.

TRY "Read me the mail from my boss"

MAC GOOGLE NEW

Which account

With several accounts, name the one a mail, an event or a contact is for ("from my work account", or its address), or set a default, one for work and one for personal things: she uses them when you don't say, and asks when it is still unclear. Your calendars and contacts are read from every account. If an account is missing a permission she needs, she says which and how to reconnect it.

TRY "Email my colleague from my personal account"

MAC GOOGLE

Expired mail archived

Offers, event notices and other mail that runs out leave your Mac's inbox 30 days after their date, judged once each. Flagged mail is never touched, and nothing is deleted.

TRY "Stop archiving my old offers"

MAC ON HER OWN NEW

Routine notices filed

Receipts, delivery updates, statements and transfer confirmations, trial and subscription notices, meeting recordings, and notices of a change you made yourself are filed instead of waiting in your digest. One that needs you still comes forward: a failed payment, a charge you may not expect, a sign-in or change you didn't make, a deadline.

TRY "Keep receipts for my digest"

MAC GOOGLE MAIL FORWARDING ON HER OWN NEW

A heads-up on unverified asks

Mail that asks for money (a wire, an invoice, a distribution, bank details) or your account (a password reset, a recovery, a sign-in) from someone you don't know, or whose replies or name point somewhere else, comes with a heads-up: check with them directly, not through the mail's links or numbers.

TRY "Is this wire request real?"

MAC GOOGLE MAIL FORWARDING NEW

New Gmail sorted

She reads new mail as it arrives and tells you what needs you.

GOOGLE ON HER OWN

Spam cleared from Gmail

Once Gmail is connected (turn it off in Settings → Gmail → Clear spam), every 15 minutes (5 to 60), mail like what you put in Lumina/Archived leaves your Gmail inbox for the Lumina/Cleared label: the same sender, mailing list, or a domain once two of its senders were archived; new bulk mail of no kind she knows, and a stranger's first email, are judged by a small model against what you archived, a few tokens a day. A bulk sender it is sure sends spam is cleared from the whole inbox, older mail too. So is a shop's other bulk mail from its own domain under its own name. Archived, never deleted; never starred mail, work mail, nor anyone you know or wrote to. Move one back to the inbox, from Lumina/Cleared or Lumina/Archived, and that sender is not cleared again. Settings → Gmail lists what she cleared, with Not spam.

TRY "What do you clear as spam?"

GOOGLE ON HER OWN

Gmail organized into folders

Your Gmail inbox keeps what matters: new offers, newsletters, notices and social mail leave it for the Lumina/Offers, Lumina/Newsletters, Lumina/Notices and Lumina/Social folders as they arrive. Rules decide, no model call. A person's mail, anyone you know or wrote to, your own domain's, starred mail, security mail, an ask for money and anything that needs you stay. A sender whose mail you trash is filed even when it would have waited for your next break. Move one back to the inbox and that sender stays there. Ask her to look through your whole inbox once, first counting what would move. Filed, never deleted.

TRY "What would you file from my inbox?"

GOOGLE · ON HER OWN · NEW

Old mail archived from Gmail

Past calendar notices, offers and promotions past their date, old notifications and automated mail, and conversations long finished leave your Gmail inbox for the Lumina/Cleared/Old mail label, every few hours. Rules decide most of it; a small model judges only old conversations, a few tokens each. Starred mail, receipts, security mail, mail you filed and conversations waiting on you stay. Clear your whole inbox once from Settings → Gmail → Old mail or by asking her, with its progress, a count by kind and Put them all back. Archived, never deleted.

TRY "Clear old mail from my whole inbox"

GOOGLE · ON HER OWN · NEW

Mail you forward

Without a Mac or Gmail, forward your mail to your own address and she reads and sorts it.

TRY "Anything important in my forwarded mail?"

MAIL FORWARDING · ON HER OWN

Email you

A briefing, a list, a summary, with the PDF.

TRY "Email me that list"

HER EMAIL

Email people for you

From her own address as your assistant, copying you; someone new waits for your yes.

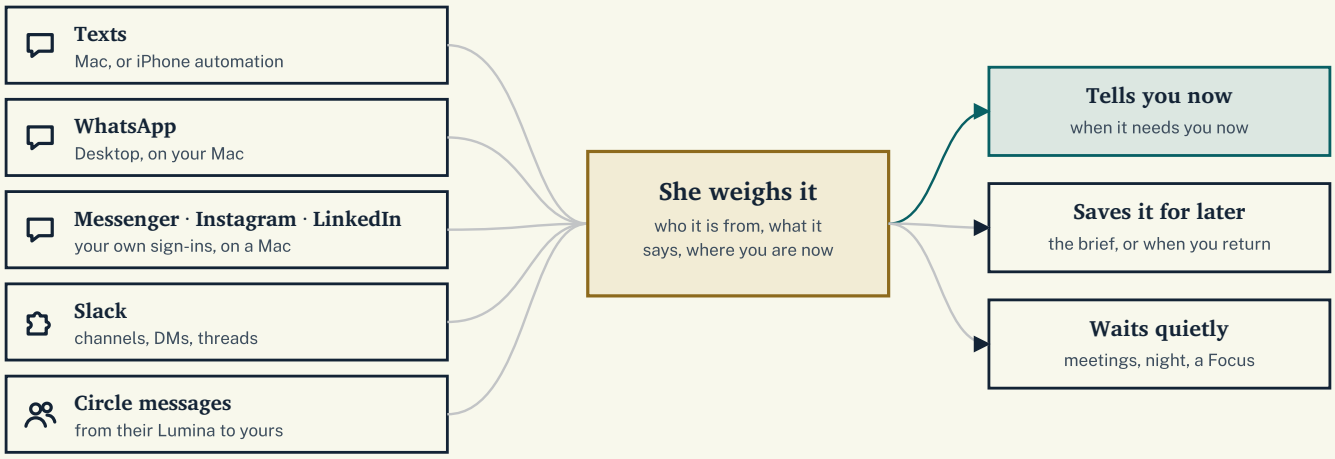
TRY "Email my colleague to ask if Thursday still works"

HER EMAIL · ON HER OWN

Messages

9 FEATURES

Texts, WhatsApp, Messenger, Instagram, LinkedIn and Slack in one place. She reads them as they come, weighs who sent them and what they say, and tells you now, later, or not at all. Replies wait for your yes.



Waiting to hear from someone? Say “tell me when it comes”, and she watches for it on every channel.

Your texts

Read recent texts and send a reply on your yes.

TRY “Any texts from my daughter?”

MAC · ON HER OWN

Texts on your iPhone

With no Mac, your iPhone can pass her the texts you receive, as they arrive, through an automation you make once in Shortcuts. She hears from the people in your contacts and tells you what can’t wait. Never texts you send, older texts or codes.

TRY “How do I let you see my texts?”

IPHONE · ON HER OWN · NEW

Text you

She texts you a list, a link or a note.

TRY “Text me that address”

MAC

Tell me when it comes

Waiting to hear from someone? Say who (one person or several, by name, address or number) or what it is about, and she watches every channel she reads (mail, texts, voicemail and missed calls, WhatsApp, Slack, DMs, circle messages) and tells you the moment it comes, through a Focus and the night, never aloud in a meeting. A name takes in the addresses and numbers on their card. Each person is told of once; a watch ends when all have written, or after 30 days.

TRY “Let me know when the passport office writes”

ON HER OWN · NEW

WhatsApp

With WhatsApp Desktop linked on your Mac she reads your WhatsApp and tells you about new messages from people you know; she drafts a WhatsApp message on your yes and WhatsApp opens with it for you to send; a chat you export and share to Lumina she reads and keeps 30 days.

TRY “Anything new on WhatsApp?”

ON HER OWN · NEW

Messenger, Instagram and LinkedIn

Through Lumina for Mac, signed in to your own accounts, she reads your direct messages there and tells you about new ones from people you know; she replies in a thread after your yes on a card and archives a thread when you ask.

TRY “Any new DMs?”

MAC · ON HER OWN · NEW

What’s going on in Slack

What matters in the Slack channels and group DMs you belong to: decisions, asks of you or your team, deadlines, incidents and announcements, by channel with links. When you ask, and in your morning brief.

TRY “What’s going on in Slack?”

SLACK · NEW

Slack, beyond posting

React to a post, yours or anyone’s; run a quick poll and count the votes; create a channel and invite people; edit or delete your own posts; see and cancel scheduled posts; share a file; set your status. Say @ and a name and she finds the person. Each after your yes.

TRY “Thumbs-up my colleague’s last post in #design”

SLACK

Texts and mail on her own

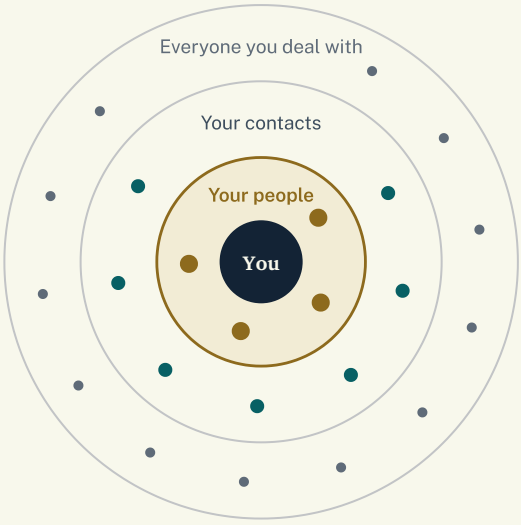
A few a day, to people in your Contacts, as your assistant, telling you each time.

MAC · ON HER OWN

People

24 FEATURES

Lumina keeps the people in your life: who they are to you, how to reach them, their birthdays, children and pets, and what you have told her about them. She has her own phone number too, so she can call a business or send a text in her own voice, as your assistant.



Someone at a glance

Who they are to you	sister · in Hikers · reports to
Birthday and age	and anniversaries
How to reach them	in their own words
Their children and pets	names, ages, breeds
What she knows	work, home, what they love
Your recent contact	calls, texts, mail, meetings

Contacts

Look someone up, or a card of theirs.

TRY “What’s my colleague’s number?”

IPHONE · MAC · GOOGLE

Someone at a glance

Ask about anyone and she has their card in one step: who they are to you, birthday and age, work, phone and email, mailing address, interests, what she has learned about them lately and what is going on with them now. From there she can open their whole record and every detail of their contact card.

TRY "Tell me about my brother"

Names you can tap

Wherever she names people (the morning brief, the wall and its cards, Messages to you, a meeting's guests, her questions and her replies), the ones she knows are underlined. Tap one for their page: every way to reach them first, each marked (a text, their mobile, email, Slack, WhatsApp, their address) and one tap from a call, a message, a mail or Maps; then their work, who they are to you, the meetings ahead with them, what came from them lately and what she has learned. What she holds close is never shown there. A name she cannot be sure of stays plain.

TRY "Tap a name in the morning brief"

NEW

Add, change or delete a contact

In your Google contacts or your Mac's, where the person already is, else where you say or your default; a delete waits for your yes. Looking someone up searches every account, your Mac and your iPhone, and says where a detail came from when they differ.

TRY "Add my new colleague's mobile number to my work contacts"

MAC GOOGLE

Tidy your address book

Find duplicates, merge cards, correct details.

TRY "Find duplicate contacts"

MAC

Calls in her voice

From her own phone number she calls a business, someone who agreed to her calls, or you, and holds the whole conversation in her own voice: a reservation, a question, a message, a hotel's front desk. She opens with "Hi, this is Lumina, <your name>'s assistant", and tells you how it went. A call to anyone but you waits for your yes (or a standing approval). Calls to her number she answers and takes a message. $1 a minute. Her number is bought when you sign up, stays yours as long as your account does, and is saved on your iPhone as her contact card, so her calls get past call screening.

TRY "Call Rioja and book a table for two at 7 on Friday"

ON HER OWN NEW

Texts from her number

From her own phone number she texts you, and anyone who opted in by texting START to her number, as herself, your assistant; a business only once it has texted her. She answers their replies within what you approved and tells you how it went. A text to anyone but you waits for your yes (or a standing approval for texts). Texts to her number from others she answers briefly, takes the message and passes it on. Text her number from your own mobile any time and she answers by text as in the app, with her tools and memory; what needs your yes waits for it in the app. You opt in on the last setup page, and STOP ends her texts to a number.

TRY "Text my daughter I'm running late"

ON HER OWN NEW

Calls

She places a call you ask for; you confirm it.

TRY "Call my daughter"

IPHONE

Call 911

Ask her to call 911 (or 112, 999, 000 where you are, or 988) and iOS's Call prompt is on your screen at once, with nothing to approve first; locked, a Call 911 notification, and she reminds you of Emergency SOS; when no phone is on the conversation she tells you plainly to dial it yourself; with no signal the phone tells you at once to call it yourself or use Emergency SOS, and she asks after you once you're back.

TRY "Call 911"

IPHONE NO SIGNAL

Your Phone favorites

She knows who is on your iPhone's Phone favorites, in your order, and which number or way each one uses, so a call you ask for goes to the number you starred. Lumina for Mac reads the copy of the list that macOS 26 keeps from your iPhone, with Full Disk Access. Read only: she never changes the list.

TRY "Who's on my favorites?"

NEW

Your recent calls

She knows your calls of the last week: who (from your contacts, else the number), whether you called or they did, when, how long, and how it ended: completed, missed, declined, dropped or not answered. Today's are in front of her; the rest of the week she looks up. A Mac with Full Disk Access reads the call history your iPhone shares with it over iCloud; the iPhone app adds each call's timing while it runs, without who. Numbers, times and lengths only, never what was said.

TRY "Who called me today?"

IPHONE MAC NEW

Your voicemail

She knows when someone left you a voicemail, how long it is and whether you have heard it, on the call it came from, and reads what they said from Apple's transcript on your Mac, as she reads your texts. Ask and she reads it to you again. It needs Lumina for Mac with Full Disk Access and your voicemail synced from your iPhone. A switch in Settings turns the reading off.

TRY "Any voicemail?"

MAC NEW

Missed calls that matter

When someone in your contacts calls and you miss it, she weighs whether to tell you, as she does a text: from the people closest to you, a missed call with a voicemail or calls again within minutes can be urgent. Missed calls you haven't returned and your voicemail are on Messages to you, and a person's page shows your calls with them. She reads every new voicemail from Apple's transcript, as she reads your texts: to judge whether it needs you, for Messages to you and the person's page, and to learn about the people you know. A missed call alone from a number not in your contacts she leaves to your phone; its voicemail she screens like a text from a stranger. It needs Lumina for Mac reading your call history.

TRY "Did anyone important call?"

MAC ON HER OWN NEW

Deleting a voicemail

Ask and she deletes a voicemail: the Phone app on your Mac moves it to Deleted Messages, where you can get it back; nothing is erased. You confirm it first. Your Mac must be awake and unlocked, and Lumina for Mac needs Accessibility.

TRY "Delete my niece's voicemail"

MAC NEW

Who you talk to most

Who you deal with most lately, and the group chats, threads, meeting series and circles you take part in most, by what you send, call and attend, with whether it is rising or fading.

TRY "Who do I talk to most?"

Names said right

Teach her how your name, or anyone's, is said, with no phonetic alphabet: on the person's page in What Lumina knows → You and your world, say the name aloud and she plays back what she heard in her own voice, with two close readings; tap the one that sounds right, or type how it sounds ("rhymes with Dawn"). From then on her voice says it that way, in each of her languages and on her calls, while what she writes keeps the spelling. The recording is heard once and not kept. In conversation, tell her how it goes and she keeps it too.

TRY "You're saying my name wrong: it's Shi-vawn"

NEW

What she knows about them

As you tell her about the people in your life, she keeps it: what they do, where they live, what they love, and what they are like. From what you tell her, and from what people write (quoted). She may also keep her own reading of what someone is like from a pattern across their messages, weighed less than anyone's words and shown as hers. What Lumina knows shows each person, what she holds and the words or reading behind it, with Correct and Forget.

TRY "My daughter-in-law is a nurse"

Your closest people

The people on Your people are kept in her own records: their relationship, what they go by, birthday, anniversary, and how to reach them (mobile, home and work phone, personal and work email, home and work address), each shown with where it came from. Everyone related to your own contact card (family, friends, colleagues) and everyone her records say is family is on the list, not only the inner circle; someone else's partner stays theirs; and two entries that are one person are put together, which you can undo. Tell her who someone is or how to reach them and she adds or corrects it, as your own change on the page would. Your inner circle (partner, children and grandchildren) is with her on every turn, and everyone's birthday and anniversary in the coming week, with nothing to look up and no device to reach. Every contact card that is them (your Mac's, your iPhone's, Google's) is linked and merged into one entry, kept in step both ways: the newest change wins, what you gave Lumina beats any card, the entry goes out to every card she can write (not one only on the iPhone), and a different value a card still holds is shown under the entry. What is coming up in their lives (a surgery, a wedding, a move) she keeps with them, from what you tell her, your calendar and their messages; health stays close.

TRY "When is my sister's birthday?"

ON HER OWN NEW

Contacts

Your people as a contact book: search across names, what they go by, who they are to you, where they work, and their phones, emails and addresses; or flip through their cards one at a time with a swipe or the arrows, narrowed to a first or last name that starts with a letter or contains a few. Each card is the whole entry (name, relationship, work, education, birthday, anniversary, every way to reach them, the cards it is linked to), with their picture when one was uploaded and their initials otherwise; a tap calls, texts, mails or maps.

NEW

Your family tree

Menu → Family tree draws your family on the iPhone and the Mac: everyone on Your people who is family, whether or not they have joined a family circle (those who have are marked), placed by what the list says each is to you, by the parents you give for them, and by who their contact cards name as their parents and partners. Around you or anyone you center it on, radial or in rows (a generation per row, each family under its own parents); touch someone for who they are to the one at the center, and Edit to change who they are or who their parents are, saved on Your people and their linked cards. A relative nothing connects yet waits under the drawing with what the list says they are to you.

TRY "Show me my family tree"

NEW

Your people from Contacts

Add several people to Your people at once from your contacts: on the iPhone, pick as many as you like in Contacts; on the Mac, tick them in its own Contacts. Each comes with the name and birthday on their card and stays linked to it. Before they are added you see them all, each with a relationship and sex to choose (filled in where her records already know them, from your own contact card or what you told her), a name to type when the card lacks one, and anyone to leave out; someone already on your list is shown, never added twice. One Add puts them all on the list.

NEW

Their children

Each person on Your people can have their children on the card, before their pets: first and last name, date of birth (the year optional) or an age, sex, and a line of Info such as the college they go to. A child who is on Your people themselves is linked to their own card: the name, date of birth and sex shown are theirs, a change from either card changes the one record, and the parent joins their parents, so the family tree and the card always agree. Someone on Your people whose parents name a person shows on that person's card by itself. Add them on the page, or tell her and she keeps them, marked as from what you told her (or from your messages) and yours to correct. She knows each person's children as she knows the person: in full for the inner circle and on their whole entry, first names and ages for everyone else. A child's name goes to the person's linked Apple and Google cards as a related name (son, daughter), and one a card names comes back onto the list. Someone who already has two parents on Your people is linked as a stepchild, beside those parents. She may ask about an inner-circle adult's children once, at a calm moment, and never again for that person, whatever the answer. In a family circle, a person's children go on their card under the family contacts tick once Lumina's circles keep them, a child under 18 only with that child's own Share tick. A child not on Your people goes into no invite or family tree you share.

TRY "My sister has two kids, a girl and a boy"

ON HER OWN NEW

Their pets

Each person on Your people, and you yourself, can have pets on the card: name, kind of animal, breed, colour and about how old, the age moving on by itself. Add them on the page, or tell her and she keeps them, each marked as from what you told her and yours to correct. She knows them as she knows the person, with what is not known yet, and may ask about it when it comes up; that is her call, and a no is the end of it. A pet's name goes to the person's linked Apple and Google cards as a related name labelled "pet", and one a card names comes back onto the list. Each card has Add a pet: the name, then a kind from a short list with its breeds to pick, a colour and about how old, all but the name optional. An invite from your people list carries the person's pets when the Pets tick is left on; their Lumina offers each as what you said, and it goes into their own pets only when they say it is right.

TRY "My sister's dog is called Biscuit"

NEW

How to reach someone, in the person's own words

When someone on Your people writes from the person's own address or number, she reads it for how to reach the person: the phones and addresses in a mail signature, or "my work number is…" in a text. The first time, she reads the person's past mail, texts and messages, puts what she finds on Your people (a changed number too) and on the person's contact cards, marked where it came from, and tells you what changed. After that, a new message's new detail is asked first, by her and on Your people. Never what anyone else says about the person, a forwarded or quoted part, a group chat, or mail her checks could not trace to the person's own address. From Gmail, Mail on a Mac, mail Gmail forwards to her, texts on a Mac or from your iPhone, texts to her number, WhatsApp on a Mac and Slack, whichever you have. A changed value from an ordinary SMS or Slack is asked instead: only mail her checks trace, iMessage and WhatsApp prove who sent it.

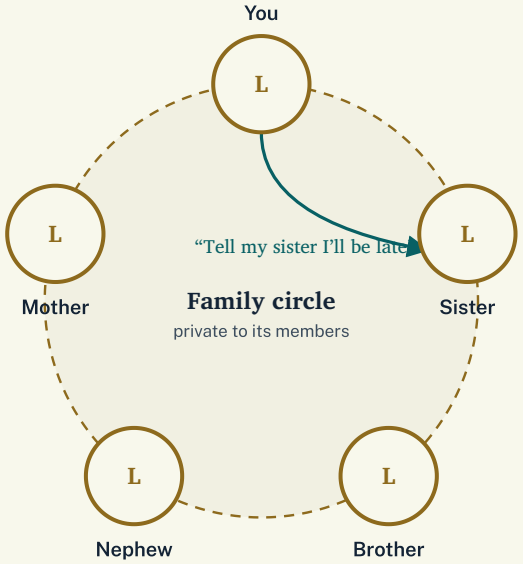
TRY "Yes, add my colleague's new number"

ON HER OWN NEW

Circles

33 FEATURES

A circle joins Luminas: family, friends, work. Each person keeps their own private Lumina, and the circle shares only what it is for: messages, a library, contacts, wish lists, a tree, a newsletter, and to-dos and reminders for one another.



What a circle shares

- **A library** — passwords sealed, recipes, files
- **A contact book** — members and their relatives
- **Wish lists, Secret Santa** — kept from the one it is for
- **A tree** — family or reporting lines
- **A newsletter** — weekly to quarterly
- **To-dos, reminders, ideas** — for anyone in the circle

Each member has their own Lumina and their own private home. Only what the circle is for passes between them.

Family on Lumina

Start a family circle under Menu → Circles → New circle (none is made for you), invite family, and pass messages between your Luminas, each on their own account.

TRY "Tell my daughter's Lumina I'll be late"

ON HER OWN

Circles

Any number of circles beside your immediate family (an extended family, work, friends), each private to its members, with messages and shared items (one item can go to several circles, and your edit updates every copy); when two fit she asks which. An invite to someone in another of your circles waits for their yes in their Lumina; anyone else gets a code and link she sends by email, text or Slack (where they've been in touch lately, or as you say). By voice she can send your documents, her pictures and files shared to her along with a message. In Circles on the iPhone or the Mac, each circle has its messages (write to everyone or a few, reply, read what the others sent), an organizer makes others organizers and removes members, and anyone can leave. Someone without an iPhone (there is no Android app yet) joins and uses Lumina on a Mac: Lumina for Mac, set up and paired in a browser; the invite and its page say how.

TRY "Make a circle for my hiking friends"

ON HER OWN

A welcome for the people you invite

When you invite someone new by code, the invite sheet on the iPhone or the Mac shows what their Lumina will know about them, drawn from your records: what they are to you, the town they live in, their sex only if you set or said it, where they work and their title, their spouse or partner, their children and how you know each other. Edit or clear any of it; only that goes with the invite, and only once they accept (never anything from your mail, nothing about faith or health, no notes or opinions). Unless you turn off Look them up online, after the invite goes she searches the public web with their name, work and town; only if one person clearly matches on two sites does she add their current role, employer, town and public bio, each with its link (never people-search sites, no photos). Their first greeting says it lightly: “Hi. I’m Lumina. I understand that you’re your sister’s younger brother and live in Portland, Oregon. Welcome to the Rivers!”, in their language. Their Lumina keeps each thing as unconfirmed, saying where it came from (“Your sister told me, in the invite”, “From example.com”), for them to confirm, correct or forget; the invite itself says your sister shared a few things. Until they accept it waits with the invite, and it goes only when you take the invite back or delete the circle, never on its own.

TRY “Invite my brother to the family”

ON HER OWN NEW

Circle messages while she rests

When someone in your circles sends an ordinary message while your Lumina is not running, it can reach your phone without waking her: the hub follows your own quiet settings as she last left them (night, sleep, meetings and appointments, a Focus, her interruption limits, your digest), and the words are the ones the sender’s Lumina wrote for you, in your language. She learns of each one when she next starts, as if she had sent it herself. Urgent messages, news of someone in the family hurt or in hospital, a sender you asked to hear from at once, and anything she would say aloud still wake her for her own judgment.

TRY “Did anything come from my circles while you were off?”

ON HER OWN NEW

Report and block in circles

Block anyone in your circles (in every circle you share; they are not told), or report a message or a member to Bioscope’s team, who review each report within 24 hours. Messages with slurs, sexual terms or threats are refused before anyone gets them.

TRY “Block that member in my circles”

Urgent circle messages

Mark a message to people in a circle as urgent, or ask her to tell someone right away (ten a week in each circle, five a day to one person): it reaches them at once, gets through their meetings, night, sleep and Focus, asks them to answer, comes once more after an hour unanswered, and stays at the top of their Circles until they answer or set it aside. You see who heard, read, answered or dismissed it. Someone’s urgent messages can come to you as ordinary ones if you ask her.

TRY “Tell Dad right away that I’m home”

ON HER OWN

Who someone in a circle is

When someone in one of your circles has a card with the number or email of a person on Your people, Lumina does not take that member as the person until you say so, since anyone can copy a number. Tell her it is the same person, and your messages through Lumina, your family tree and your family sharing take the member as that person; tell her it is not, and the member’s card is no longer linked to that person, for good.

TRY “The new member in Hikers is my sister”

NEW

Owning a circle

Whoever makes a circle owns it: only the owner deletes it (for everyone, with its messages; the others are told who deleted it, and see it in their Circles until they set it aside) or hands it to another member. Organizers rename it. An owner who leaves without handing it over leaves it ownerless, and the first member to claim it owns it. If the owner’s account is deleted, the circle passes to its longest-standing organizer and everyone in it is told. In Circles on the iPhone or the Mac, or by asking her.

TRY “Rename the Hikers to Trail crew”

ON HER OWN

When someone you invited is in

When someone you invited to a circle says yes, you hear it ("Your brother accepted your invite to Hikers"); when they also have the app set up and are a full member, you hear that once more ("Your brother is in Hikers now: the app is set up and they've joined"); if the two come close together it is one telling. Lumina decides how and when: she has the facts (who, which circle, what isn't known yet, whether you are in a meeting or a call and until when) and her practice that this kind of news is usually better held while you are busy and told as soon as you are free; what she holds comes back to her the moment you are free. Night, sleep and a Focus still hold it; both show in Circles on the iPhone and the Mac until you set them aside. Only the person who sent the invite hears. She can also say where each invite you sent stands.

TRY "Has my brother joined the Hikers yet?"

ON HER OWN

Your circle's own AI key

The owner of a circle can give it its own Anthropic API key, on the circle's screen in Circles on the iPhone or the Mac (never in a conversation). It is checked with Anthropic, sealed and never shown again, even to them; organizers see whose key it is, its last four characters and whether it works. Each member chooses it in Settings → Your circles' AI, one circle at a time: their use then goes through that Anthropic account, which sees how much is used but never what is said, and Lumina charges half its normal rate. If the key stops working, she carries on with Lumina's own AI at the normal rate and says so.

TRY "Is the Hikers' AI key working?"

ON HER OWN NEW

Messages to people through Lumina

Tell her what to pass to anyone in your circles ("Tell my sister I'll be late for dinner"): their Lumina passes it on in her own voice and in their language, as close to your words as she can, keeping names, numbers and times as you said them, and saying so when she isn't sure of a word. They answer with "Tell him …" and it comes back to you the same way, and so on. It reaches them soon, though night quiet, sleep or a meeting holds it, unless you say it's urgent or to tell them right away: that reaches them at once. You hear when they've heard it. The wording is on you, a few tokens a message.

TRY "Tell my sister I'll be late for dinner"

ON HER OWN NEW

A circle's contact book

Every circle keeps a contact book: each member's own card, and relatives outside the circle that a member adds. You choose, field by field, what your card shares in each circle (asked once, with suggestions by its type), and when you change those details in Your profile, everyone in the circle has them at once. A relative's card is changed by whoever added it or an organizer, and stays with the circle if they leave; anyone else sends a correction. Each circle's book can be copied one way into your Google contacts (under a label named after the circle) or the Contacts on your iPhone (in a group): an empty field is filled, a person's own change replaces the old value, and anything you typed yourself stays.

TRY "Share my card with the family"

ON HER OWN NEW

A gift of tokens to new members

An organizer of a circle may give each person who joins it 25,000, 50,000, 100,000 or 250,000 tokens, once; after that, the member pays for Lumina. One giver per circle. Each choice says how many days of typical use it is. Only people who join after it is set get one; when the giver's balance can't pay a gift, it waits until the giver tops up. Whoever makes a circle may choose it there, on New Circle, and its invites say so. A gift and a cover from one organizer don't go together: choosing one ends the other.

TRY "How many tokens do I give new members of the Hikers?"

ON HER OWN NEW

Covering your circle's use

An organizer of a circle may pay 25%, 50%, 75% or all of what every member uses, one payer per circle; all of it may have a weekly limit for each member (5,000, 10,000, 25,000 or 50,000 tokens: past it, that member pays until Monday) or last a set time (1, 3, 6 or 12 months from each member's joining, or from when it was set for those already in). Lowering or ending it gives members a week's notice; members are told when it starts, changes, pauses or ends, when they reach their week's limit and when it renews, and a week before their time ends. The payer sees each member's covered tokens this month, never what they asked. In several circles, the highest share applies. A cover and a gift to new members from one organizer don't go together: choosing one ends the other. Whoever makes a circle may choose it there, on New Circle, and its invites say so. The payer pays each week ahead, an average member's week (or their weekly limit, when lower) at the share for each member still covered, and gets back what was not used.

TRY "Who pays for my Lumina?"

ON HER OWN NEW

Circle types

Each circle has a type: Family, Extended Family, Friends, Work or Direct Reports, or one of your own (a name, an icon, and the type it works like). Family and Extended Family bring what families have: teens and children with a guardian, shared sizes and wish lists, a family tree. Pick it when you make a circle, and an organizer changes it later, in Circles on the iPhone or the Mac. Your own types are yours to give; the members of a circle see its name and icon.

TRY "Make a friends circle for my book club"

NEW

Photos and files in circle messages

Send photos, PDFs or audio with a circle message from the iPhone or the Mac, up to five and 20 MB in all; whoever it went to opens them in their Circles, and no one else can. Ask her what a photo shows or what a PDF says, and she looks at it for you.

TRY "Show me the photo my sister sent the family"

ON HER OWN

The circle library

A shared library in each circle: passwords (kept sealed), recipes, recommendations, notes, photos, PDFs or any file, found by meaning by anyone in the circle, through her or in Circles on the iPhone or the Mac. Whoever adds an item owns it and alone changes or deletes it; it ends after a year unless kept indefinitely, with a warning two weeks before. Keeping one costs its owner 10 tokens a year (plus 5 per MB), opening one costs 2 (plus 1 per MB); searching is free.

TRY "What's the Netflix password?"

ON HER OWN

A circle newsletter

A circle's organizers turn on a newsletter: every week, two weeks, month or quarter, about 1, 2 or 4 pages, either written by her as a colourful PDF (with the circle's logo when it has one) or uploaded by an organizer. Hers draws only on what everyone in the circle may see: what was added to the library and its photos, who joined and left, birthdays and anniversaries from the tree, how many messages there were (never their words), the editor's note, and good news she learned about members (a new job, a baby, a wedding). The editor may say what every issue should cover: she researches it on the web (sources cited) and in their own Slack, in channels they name with # (their threads too) and in public channels, never DMs, a few searches an issue; a Slack message about someone's own health (an illness, a leave, a medicine, a reading) is left out, while the team's health work goes in; how many of the issue's stories come from Slack and how many from the web is hers to weigh by what the editor asks. The editor gets each issue a day before it goes, to look at, send, hold or drop; news about people goes only in an issue they send themself, and what came from Slack too unless they choose otherwise. Members are told, and read every issue in Circles on the iPhone or the Mac for a year. She is its editor too: she reads the draft, rewrites it by her own directions, schedules it to go out complete, and removes an issue already sent; the editor may give her the call on every issue, and hears after. Whoever turned it on pays for its issues, the members' reading included: about 250 to 600 tokens an issue, up to a few thousand with research.

TRY "Make a monthly newsletter for the Hikers"

ON HER OWN NEW

Invite from a description

On a circle's Invite page, type who should be in it, such as "me, my kids, their partners and my granddaughter". Lumina reads it against Your people, in any of the six languages, with its typos and how to send ("by text", "by email"), and shows a list: each person with why they matched ("Son", "Mira's boyfriend"), the email or mobile it would go to (the mobile when you asked for texts) and the other addresses on their entry. What it can't settle is said, never guessed: two people with one name, a grown child with no partner on record, someone with no address, someone under 13. A name that isn't on Your people is looked up in your own Slack workspace, when Slack is connected, and in your own mail (Gmail first, else your Mac's Mail): each one found is shown with where it came from and whether the full name or only the first name matched, ticked only when sure, and goes by email or as a Slack message from you only once you send it. Inviting one person, the picker also lists the people of your Slack workspace, when Slack is connected and Slack lets Lumina see work emails: each by name and work email, after Your people (someone on Your people with that email is listed there once), leaving out anyone already in the circle or invited; choosing one fills the invite as if you'd typed the address. Remove anyone, add someone, change an address, then one Send makes and sends each invite on its own, worded for someone new and for someone who already has Lumina. With each goes what Your people has about that person, each field ticked for you to untick: nickname, sex, birthday, what they are to you, their town, mobile and email. Once each one accepts, that person's Lumina knows it: it greets the person with it and keeps it as things you said, to confirm, correct or forget; a decline deletes it. On the same page, choose how their use is paid, for the whole circle: they pay their own way, you cover everything, up to a weekly limit for each, a gift to start, or everything for a set time from each one's joining.

TRY "Invite my kids and their partners to the family circle"

NEW

Send an invite again

An open invite can go again, the same code and link, by text from your own number (through a Mac with Messages), by email from Lumina or by Slack, whichever this account can send on: from its ⋯ in the circle's Invites (Send again by text, by email or on Slack: each way it can go now, then its address to see or type), from Invite from a description (someone with an invite open is listed; tick them, and when you said how, such as "sent by text from me", they are ticked to go that way), or by voice after your yes, with where it goes on the card. Only an organizer, only an invite still open and not expired; one invite goes at most 3 times a day, within your 60 invite sends a day. The row says where it last went, and "again" once it went before; one that expires just as it goes gets a fresh week first.

TRY "Text my niece her invite again"

NEW

A gift of tokens with an invite

When you invite someone to a circle, from the Invite screen you may give that person 25,000, 50,000, 100,000 or 250,000 tokens, once, from your own balance; each choice says about how many days of typical use it is. It is charged only if the invite is accepted: nothing for one revoked or never accepted. When your balance can't pay it then, it waits until you top up. It is for someone new and for someone invited in their Lumina alike, and it comes on top of any gift the circle gives every new member. The invite says so.

TRY "Did my nephew get the tokens I gave with his invite?"

ON HER OWN NEW

Wish lists

A wish list of up to 50 things you would like, seen by everyone in your family circles: each with what it is, a link, the occasion (Christmas, a birthday…), a price and the most to spend. Claim something on someone else's list and it shows as taken to everyone but them, never by whom; your claims list who it is for, the occasion and when you claimed it, and stays as it was even if they change their list. She offers to remind you from two weeks before the occasion, until you mark it handled, and suggests gifts from their list and what she knows of them. In Circles → Wish lists on the iPhone and the Mac. Changes and reading lists cost a fraction of a token; a reminder about 100.

TRY "What should I get my sister for Christmas?"

ON HER OWN NEW

A circle's people in Your people

One tap in any circle's Contacts, family, work, friends or any other, brings its people onto Your people: the members' own cards and the relatives on its cards, or one person at a time with each card's own Add. Each goes on outside your inner circle, as who they are to you by the circle: a family circle's tree says how they are related, a work circle's members are colleagues, a friends circle's friends. Someone already on Your people (a shared mobile or personal email, or the same name and birthday) is linked rather than added twice; someone who only may be there waits for you to say: the same person, or someone else. They stay linked to their cards in the circle: an empty detail fills from the card, and a detail the circle gave follows its later changes. Nothing you entered is replaced, and leaving the circle takes no one off.

TRY "Add the Hikers to my people"

ON HER OWN NEW

Your family, shared in a family circle

Making a family circle, you can share your family contacts and your family tree with it in one tick; everyone you invite starts with them, and each can add their own when they join. What fills a gap merges by itself for everyone, you included: a phone, an email, an address or a birthday someone else knows, a relative no one had, who is whose parent. A different value never replaces one: it goes to whoever keeps that card to answer. Only family on Your people, never friends, colleagues or health. Anyone in a family circle you joined with a yes can fill an empty mobile, email or address on your entry for the same person: it is marked as the circle's, goes on to your linked Google and Mac contacts, and leaves Your people when you leave the circle.

TRY "Share my family with The Browns"

ON HER OWN NEW

Send your family tree to a family circle

Any adult in a family circle can send a family tree into it at any time, also into a circle formed long before: you pick the people from your tree, the details their cards carry (phones, emails, addresses, birthdays, anniversaries, nicknames, pets), and whether your later changes keep going. Each goes into the circle's tree with who is whose parent or partner, and onto a card in its Contacts, even with only a name. Every other adult in the circle gets a notice and decides: Add to Your people, or No thanks. Nothing goes onto a member's list without that member's yes, and what a member entered is never replaced. Someone under 18 goes only once you allow it on that person's page in Your people. A link that disagrees with the circle's tree goes to its organizers.

TRY "Send my family tree to The Browns"

ON HER OWN NEW

Reporting lines in a work circle

Who reports to whom in a work circle, set on the screens: on the invite list, each person's Reporting line ("Reports to me", "My manager", "Reports to" and a name), and later on anyone's card in Reporting lines (Reports to). An organizer sets anyone's and it holds at once; a member sets their own, which waits for an organizer's yes. Someone invited takes their line when they join with that invite. Your own manager and the people who report to you become part of what she knows about your work, with the circle they came from; what you told her yourself stays.

TRY "Who reports to me?"

NEW

The circle tree

A family circle's tree and a work circle's reporting lines, drawn in Circles on the iPhone, the Mac and the page: around you (or the top of the chart), radial or in rows, with anyone who has died in a dashed ring and lines waiting for an organizer's yes faint and dashed. Touch someone for who they are to the one at the center ("your nephew's grandmother"), and center it on them. In a family circle, Edit on their card changes someone only in the tree (name, sex, the years they were born and died, or out of the tree) and anyone's parents, children and partners: an organizer's change holds at once, another adult changes the people they added, and a line they add waits for an organizer's yes; a member's own name and details are theirs. A change to someone's name, sex or years also goes to your entry for them on Your people when it is linked to them in that circle, and on to its cards; taking someone or a line out changes nothing on Your people. She adds people and lines when you tell her, and answers who is who from the tree.

TRY "Who is my nephew's grandmother?"

Your photo on your card

You set a photo of yourself in Settings → Your profile, on the iPhone from your photos or the camera and on the Mac from a file, and place it in a circle by zooming and dragging. It shows on your card in the contact book of every circle you share your card with, and on your own card in Contacts on the Mac and the iPhone. Where and when it was taken is left out, and only members of those circles see it. You change or remove it there.

NEW

A logo for your circle

The owner of a circle (whoever made it, or was handed it) sets a logo for it in Circles on the iPhone or the Mac: a photo or a PNG, JPEG, HEIC or WebP picture up to 10 MB, which they zoom and place in the circle, or show whole on a background, with where and when a photo was taken left out. Everyone in the circle sees it beside its name and on its page, someone invited sees it in the invite, and the circle newsletter prints it. The owner places it again, replaces or removes it there; a circle without one shows its initial.

NEW

To-dos for someone in your circles

Put a to-do on the list of anyone who shares a circle with you (family, work, friends), by voice or text. Their Lumina tells them, and it shows on their list as from you. It is theirs from then on: you do not see it again, and you are never told whether it was done, changed or deleted. Items others give you show "From" their name, and you can change or delete them like any other.

TRY "Add "pick up the cake" to my daughter's to-dos, due Saturday"

ON HER OWN NEW

Reminders for someone in your circles

Set a reminder for anyone who shares a circle with you, by voice or text, for a day and time. Their Lumina tells them it was set, and at that time reminds them, saying it is from you. It is theirs from then on: you do not see it again, and you are never told whether it was kept or canceled. A reminder someone sets for you is said "from" them.

TRY "Remind my daughter at 6 to call the vet"

ON HER OWN NEW

Secret Santa

Anyone in a family circle may organize its Secret Santa for the year by telling her; then no one else in that circle can until next year, unless the organizer cancels it. A card in the chat sets the exchange date (Christmas Day unless changed), the spending limit and the last day to join; the organizer can change them until that day. Everyone in the circle is asked, and the organizer is always in. The day after the last day to join, a draw gives each participant one other, never themself and no two the same; each is told whom they drew, with a card whose names scroll and stop on theirs. No one learns who drew whom, the organizer neither: each Lumina opens only its own person's draw. Two people can be kept from drawing each other: the organizer sets any pair, and anyone taking part can set one for themself, which only their own Lumina knows. At the reveal she has the wish list of the person you drew. Menu → You → Secret Santa explains it, and there you can start one, change or cancel it as its organizer, answer, keep someone apart, or see again whom you drew once she has told you; she remembers it. A draw needs 3: with fewer by the last day, nothing is drawn, and the organizer can move the last day later or cancel it. The organizer can cancel it at any time until the exchange; everyone asked is told, and the circle can start a fresh one. It is over the day after the exchange. After the draw, anyone not in it may still say yes, into a side pool; once 3 are in it the organizer may set one second draw just for them, and after it no one joins.

TRY "I want to organize Secret Santa this year"

ON HER OWN NEW

Ideas for someone in your circles

Give an idea to anyone who shares a circle with you, by voice or text. Their Lumina tells them, and it shows on their idea list as from you. It is theirs from then on: you do not see it again, and you are never told whether it was kept or deleted. Ideas others give you show "From" their name, and you can change or delete them like any other.

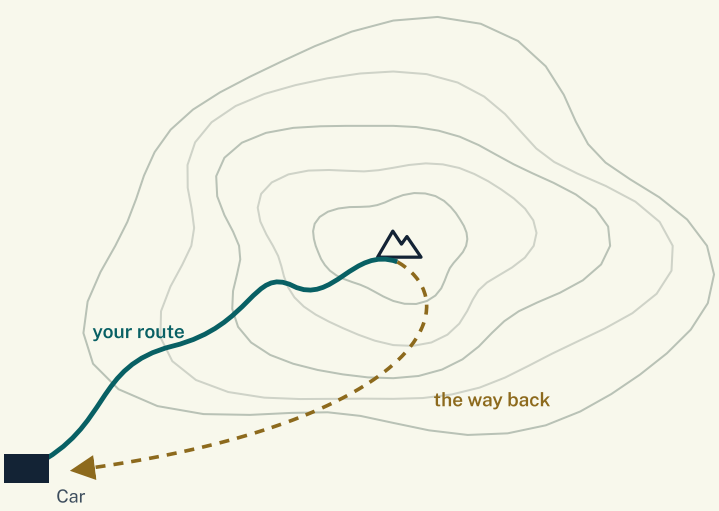
TRY "Give my grandson the idea of a treehouse in the old oak"

ON HER OWN NEW

Places and the outdoors

8 FEATURES

Where you are and have been, travel times and flights, and trips: a trip sheet two days before, a safety check-in when you are out alone, and first-aid guides that work with or without signal.



Trip sheet, two days before
getting there, permits, conditions, forecast, maps: kept on the phone

Safety check-in
out alone, she asks when you'll be back; the phone asks again, then your contact

Sunset, battery, height
answered by the phone itself

Emergency guides
first aid in her voice, and the local number

Where you are and have been

Your saved and private places and where you've been.

TRY "Where was I at noon yesterday?"

IPHONE

Your home and work addresses

Where home and work are, for travel times, your commute, getting home and the weather there. Give them at signup or in Settings → Your profile → How to reach you; with a Mac she can fill them from your own contact card, and an empty work address from your employer's website, and you change them there. They are Home and Work in your places.

TRY "Set my work address from my contact card"

NEW

Maps and travel times

Find a place, its hours, and how long to drive or walk there.

TRY "How long to drive to Park City?"

Trip sheets

Two days before a hike or trip: getting there, permits, conditions, the forecast, maps, kept on the phone.

TRY "Prepare for my hike on Saturday"

ON HER OWN

Flight status

Live departure and arrival times, gate, terminal, baggage claim, delay or cancellation for a flight, yours from the calendar or itinerary mail or any you name; checked before a flight of yours today.

TRY "What's my flight status?"

ON HER OWN NEW

Flight fares

The airlines' own prices for flights on a route and day: each flight with its times and stops, and each fare with its bags and change and refund rules; one way or round trip. Delta, Southwest, Allegiant, Sun Country and Breeze aren't included, and nothing is booked.

TRY "Nonstop flights to Boston on December 18, and their fares"

NEW

Emergency guides

Recorded first-aid steps in her voice, with or without signal, and the region's emergency number; with signal the call for help runs into the guide and then she waits for "next" after each step, with none it plays straight through; she knows the step you are on, so "how hard do I press?" gets an answer from it.

TRY "Snake bite"

IPHONE NO SIGNAL

Safety check-in

Out alone on foot, away from your places, she asks when you'll be back. Your phone asks at that time, and again 30 minutes before she texts, with or without signal. If the time passes, then two hours more, with nothing from you or your phone, she texts the contact who agreed to it your last location, battery and "call 911 if you can't reach them"; she tells them at once when you answer. With signal, still for 20 minutes after sunset, high up or near a place you marked as risky, she asks if you're okay, asks again after 10, and texts after 15 more. Before your back-by time, no signal is never an alarm. "I'm fine" and "I'm back" work with no signal too. Menu → Check-in shows your contacts and what it did. A backstop to Emergency SOS, Check In and Watch fall detection, never a replacement.

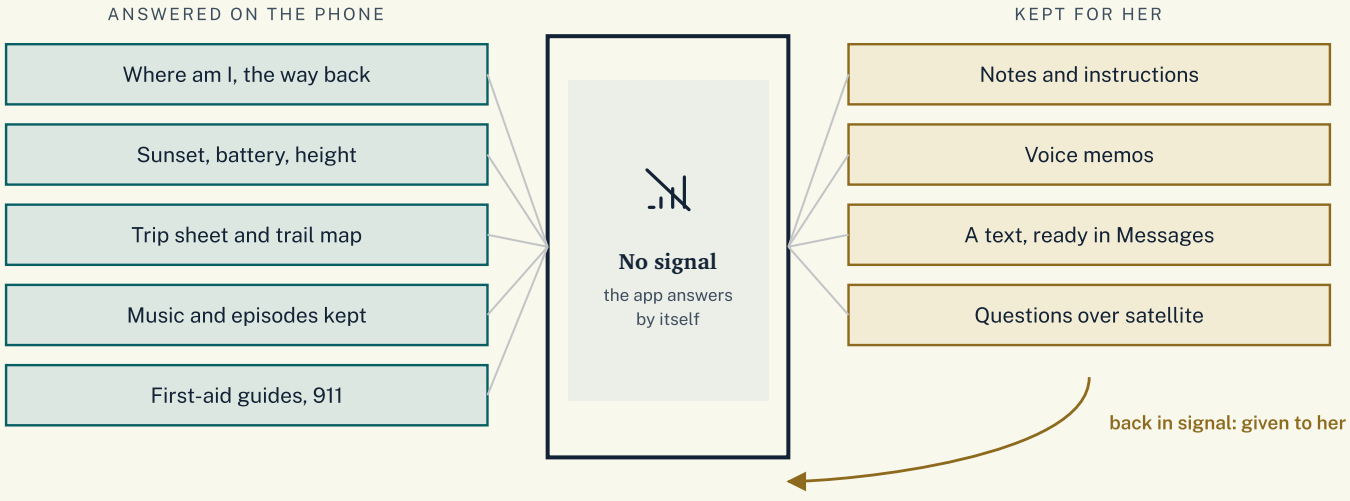
TRY "I'm heading up alone, back by 7"

IPHONE NO SIGNAL ON HER OWN NEW

With no signal

8 FEATURES

Out of range, the iPhone app answers on its own: where you are and the way back, sunset, battery and height, your trip sheet, the music you kept. Anything else you say is kept, and handed to her when you are back.



The iPhone app answers these itself when there is no signal, and tells her the rest once you are back.

Where am I, and the way back

Your position, the way back to the car or the trailhead, and the time it takes.

TRY “Where am I?”

IPHONE NO SIGNAL

Sunset, battery, height, time

Answered by the phone itself.

TRY “When is sunset?”

IPHONE NO SIGNAL

Your trip sheet and trail map

Read aloud or opened from the phone.

TRY “Read the trip sheet”

IPHONE NO SIGNAL

Music and episodes you kept

Downloaded music, and podcast episodes she kept for the trip.

TRY “Play the podcast”

IPHONE NO SIGNAL

Notes and instructions for later

Anything else you say is kept and given to her once you’re back; check or scrap what you left.

TRY “When I get back, remind me to call the ranger”

IPHONE NO SIGNAL

Voice memos

A memo recorded and written down on the phone; she files it when you’re back.

TRY “Take a memo”

IPHONE NO SIGNAL

Over satellite data

Where your carrier offers satellite data, your notes and questions still reach her as short text and her answer is read aloud; she knows when your signal is weak or satellite only, and asks after you when you used the emergency help with no signal.

TRY “Is it going to storm up here this afternoon?”

IPHONE

A text, ready in Messages

With no signal she puts it in Messages for you to send.

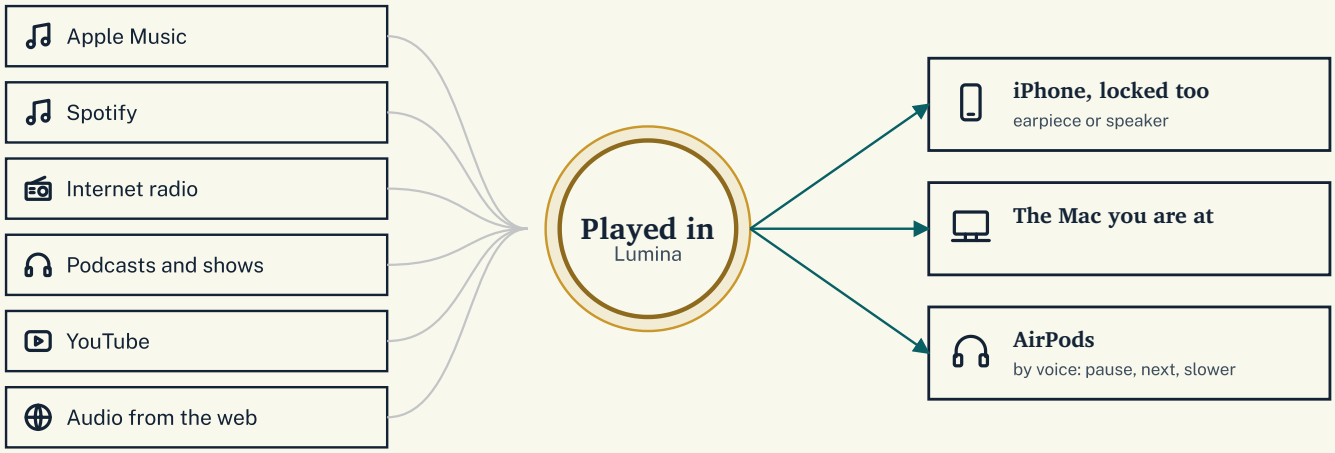
TRY “Text my daughter I’ll be two hours late”

IPHONE NO SIGNAL

Music, shows and learning

10 FEATURES

Music, radio, podcasts, YouTube and audio from the web, played inside Lumina on your iPhone (locked too) or your Mac. She is also a language partner at your level, and follows your teams.



Talk in the language you are learning, at your level; ask for your teams' scores; play Longevity Pulse.

Apple Music

The catalog or your library, played in Lumina; pause, next, slower, skip back by voice. An artist or kind of music you ask for on three days in a month, she learns you listen to often.

TRY "Play some Bill Evans"

IPHONE

Spotify

She opens Spotify on your iPhone or the Mac you are at, at a search or an album, playlist or song, or sends you its link; you press play there.

TRY "Open Spotify and find Kind of Blue"

NEW

Internet radio

Live stations from an open directory, by name, kind of music, language or country, played in Lumina on your iPhone; pause and stop by voice. A station you play on three days in a month, she learns you listen to.

TRY "Play FIP"

IPHONE NEW

Audio from the web

A recording she finds on the web, or one you point her to, played in Lumina on your iPhone, locked too, or on your Mac; pause and stop by voice.

TRY "Play the air traffic control tape of Flight 1549"

NEW

Podcasts and shows

Your shows and their newest episodes. A podcast you play on three days in two months, she learns you follow.

TRY "Play the latest Coffee Break French"

YouTube

A video found and played inside Lumina.

TRY "Show me how to tie a bowline"

IPHONE

Languages

Talk in the language you're learning, at your level.

TRY "Let's speak French"

Your teams

Scores, schedules and standings.

TRY “How did the Jazz do?”

Earpiece or speaker

Raise the phone to your ear, or ask.

TRY “Use the speaker”

IPHONE

Longevity Pulse

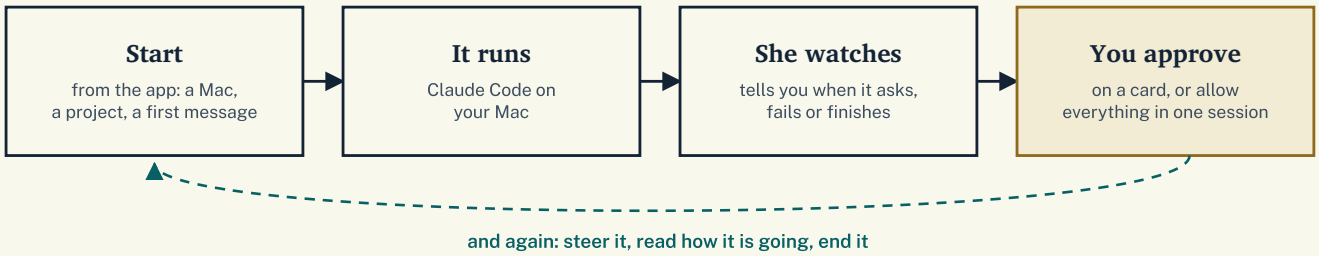
Longevity Pulse audio, played in the chat.

TRY “Play the Longevity Pulse deep dive”

Work and the web

15 FEATURES

Your work links, your employer’s news, Drive, and for physicians the medical literature and Play Doctor. With Lumina for Mac she sees, starts, steers and ends Claude Code sessions, and tells you when one needs you.



For physicians
scite.ai on a clinical question; Play Doctor with synthetic patients

Your work links
a booking link and a video-call room, given once

Your employer
public facts and news that matters

Google Drive, pages as PDFs
search and read; save a page on your Mac

The medical literature

For physicians: she asks scite.ai what the research says on a clinical question, with the papers behind it and how many later papers support or contradict each finding. Only with Settings → Work → I’m a physician on. Never with a patient’s name, and never after a chart is read in the conversation.

TRY “What’s the evidence on SGLT2 inhibitors?”

NEW

Play Doctor

See what Lumina does for a physician: turn on Doctor Mode and you and she can open the charts of Brown Longevity, the Bioscope Patient Portal’s practice of synthetic test patients, never real people. Ask her about any patient: chart summary, labs and their trends, diagnoses, medications and the documents list, read live and never kept or learned. The page lists the roster with what is new since you last looked and opens a chart as cards.

TRY “Tell me about my patients”

NEW

Claude Code sessions

See, start, steer and end Claude Code on your Macs; approve what they ask.

TRY "What are my sessions doing?"

MAC

Start a session from the app

Sessions → New session: a Mac that answers, one of the projects it lists, a first message or none, and Start; it opens in the Claude app on that Mac, under that project, with the project's own settings.

MAC NEW

Allow everything in a session

One session's permission prompts allowed without asking you, until you stop it or the session ends. Still asked of you even then: its questions and plans, credentials, a push to main, a merge, a delete outside its folder, and sending in your accounts. Its row says how many it allowed.

TRY "Allow everything in the website session"

MAC ON HER OWN

How a session is going

A busy session's step of its task list, what it is running and its latest words, each with its age, read from its own record without interrupting it; a session still writing (or whose helpers are) is not called stuck.

TRY "How is the website session going?"

MAC NEW

Watch a session

Tell you when it asks something, fails, or finishes.

TRY "Tell me when the website session finishes"

MAC ON HER OWN

Your employer

Public facts about where you work, and news that matters.

TRY "What's new at my company?"

ON HER OWN

Your booking link

The page people use to book time with you (Google Calendar, Calendly…): give it once in Settings → Work or tell her, and she sends it by mail or text when you ask.

TRY "My booking link is calendly.com/yourname"

Your video call link

Your Zoom room, Meet or Teams link for work, and a FaceTime or other link for family and friends: give them once in Settings → Work or tell her. An invitation with no place gets one, and she puts it in mail or texts asking someone to a call. With none kept, she makes a Google Meet (or asks, your choice).

TRY "My Zoom room is zoom.us/j/ and your room"

A web page as a PDF

Saved on your Mac.

TRY "Save that page as a PDF"

MAC

Google Drive

Search and read your Drive.

TRY "Find the budget spreadsheet in my Drive"

MAC

What would have helped her

Each night she looks back at the day: tools that failed, what she couldn't do, where you corrected her. When something would have helped, the morning brief says so in a line, with the list in Documents on your main page; say "file it" to make one a proposal, or drop it for good.

TRY "Read me what would have helped"

ON HER OWN

Errors reported by themselves

When something goes wrong, in her, the iPhone or Mac app, or the host, or she notices her own mistake or a limit of hers, it becomes a Lumina issue on the coordinator without asking: once per kind of error, with more of the same added to it each day while it is open. Logs only, redacted; never your messages, names or addresses.

TRY "You got that wrong; report it"

ON HER OWN

Project Coordinator

Your Claude projects file issues to each other and answer them on Lumina's project coordinator; she knows what is open and overdue in each, which projects wait for your approval, and when a project answers an issue she filed. On your word she files an issue with one of your projects, reads one to you, and comments on or closes the ones she filed or that were filed with Lumina once you have confirmed a fix together. Writes cost a few Lumina tokens (20 for an issue, 5 for a reply), reading is free. In a closed beta for now.

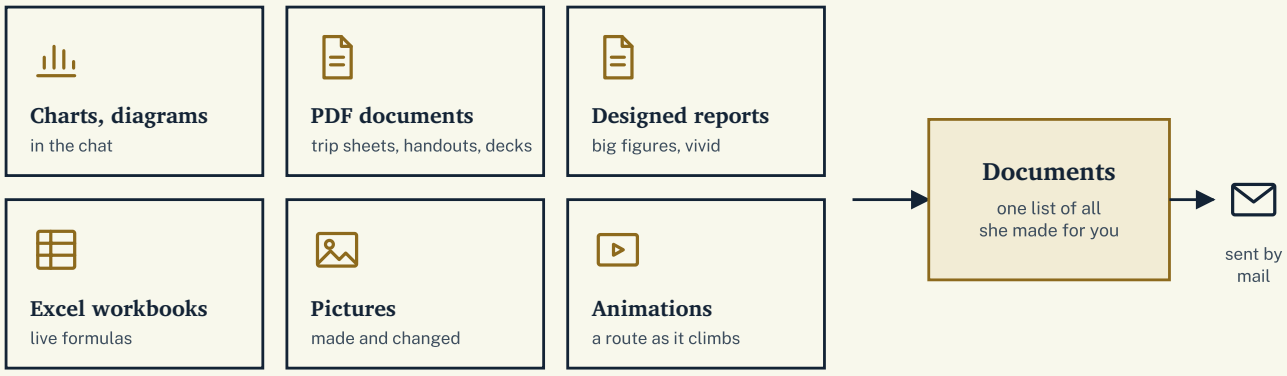
TRY "What's open in my projects?"

NEW

Documents and pictures

9 FEATURES

She makes things: charts and diagrams in the chat, PDF documents and designed reports, Excel workbooks with live formulas, pictures and short animations. Everything lands in Documents and can go out by mail.



Kept in your own library too: notes, recipes, photos, PDFs, and passwords sealed for you alone.

A designed PDF report

A highly visual report as a PDF: big figures, bar charts, tables, cards and quotes in vivid colours, from what she found and wrote. Kept in Documents and ready to attach to a mail, and made in any conversation or a complex action's run.

TRY "Make a visual PDF report on #customers this month"

NEW

Charts, diagrams and tables

Drawn in the chat from numbers you give or she finds: a chart, a diagram or family tree, a network of your circles, a drawing, a formatted page, or a table you can sort or fill in that adds up as you type. Each has Download and Open; for an Excel file, ask for a spreadsheet.

TRY "Chart my hikes' climb this month"

A PDF document

A trip sheet, a handout, a summary or a slide deck as a PDF, kept in Documents on your main page to open or share later. Not a Word or PowerPoint file.

TRY “Make me a one-page PDF trip sheet for Saturday”

An Excel spreadsheet

A workbook (.xlsx) with live formulas, so changing a number in Excel moves the totals: a budget, a gear list, a log. Kept in Documents on your main page to share later.

TRY “Make me an Excel budget for the hut trip with totals”

A picture

A photo-like picture or an illustration, made from what you describe.

TRY “Make me a picture of Grays Peak at sunrise”

Change a picture

A picture she made, changed the way you say: brighter, another season, without the car.

TRY “Make the sky in that picture more dramatic”

NEW

An animation

A short moving drawing in the chat, such as your route with the elevation as it goes.

TRY “Animate Saturday’s route”

Send what she made

A PDF, spreadsheet or picture she made goes with a mail as an attachment (to you, as you, or from her to others). In a Slack message, a text, a calendar entry or on a contact it goes as a share link: anyone with the link can open that one file until it ends (30 days, a setting). Charts and tables go as a PDF.

TRY “Email my daughter the trip sheet”

Your own library

Keep anything for yourself alone: a password (kept sealed), a note, a recipe, a recommendation, a photo, a PDF or any file. Only you can find or open it, by asking her or in Documents → Your library on the iPhone or the Mac, where you add files and photos; your recipe box’s recipes are listed with it. It is kept while your account lives, or for a year if you choose. Keeping one costs 10 tokens a year (plus 5 per MB), opening one 2 (plus 1 per MB); searching is free.

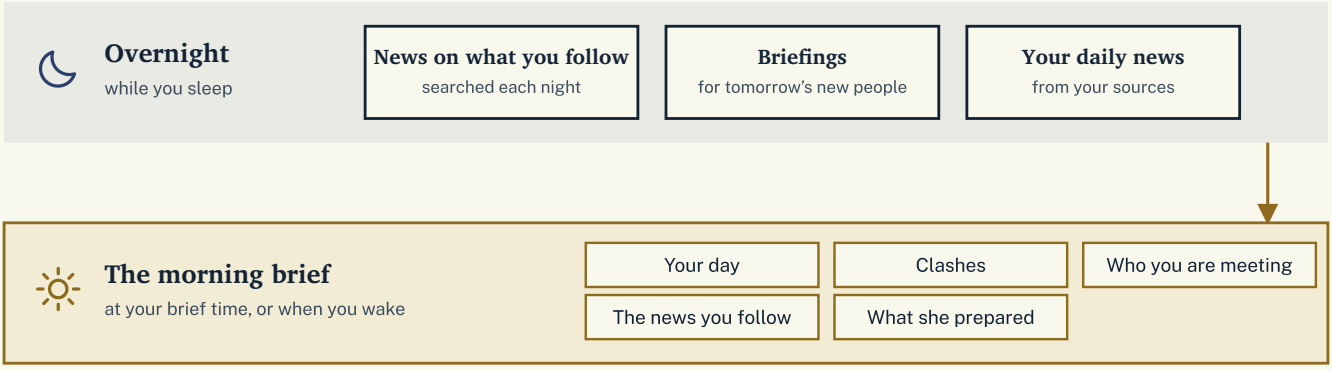
TRY “Keep my gym locker code just for me”

ON HER OWN NEW

Preparing ahead

2 FEATURES

Some of her work happens while you sleep: news on what you follow and briefings on the people you meet tomorrow, ready for the morning brief.



Briefings before meetings

The day before a meeting with someone new: the person and their organization, from public sources.

TRY “Prep me for my meeting with my colleague”

ON HER OWN

News on what you follow

Searched each night for your morning brief.

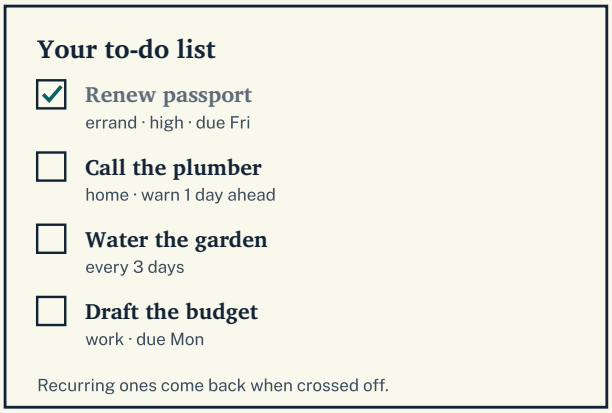
TRY “Follow news about the Utah Olympics bid”

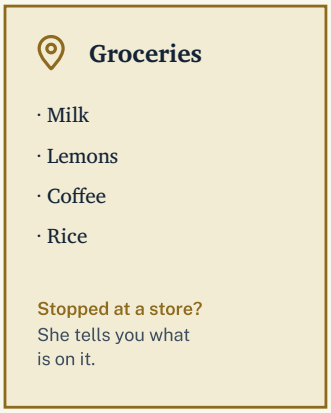
ON HER OWN

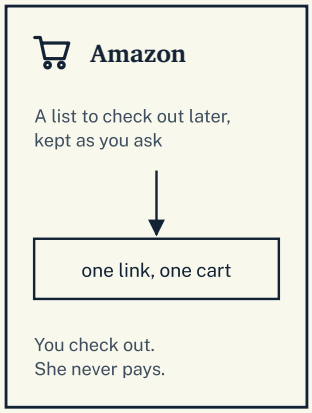
Lists and shopping

8 FEATURES

To-dos with priorities, places and warnings; ideas; a grocery list she reads out when you stop at a store; recipes scaled to how many you cook for; and Amazon lists that become one cart for you to check out.







Your to-do list

Things to get done, with a type, a place, a priority, a due time and a warning ahead; she warns you, keeps what is due in your brief, and helps get each one done.

TRY “Add “renew passport” to my to-dos, due Friday”

ON HER OWN NEW

Recurring to-dos

A to-do that comes back: every few days, weeks or months, or on the weekdays you choose. Cross it off and the next one is on your list, due at its next time.

TRY “Add “water the plants” every 3 days”

NEW

Your ideas

Up to 100 ideas, each just its words, kept until you delete them. Tell her an idea and she keeps it as you said it; ask for them back, find one by a few words, change or delete one. On the iPhone and the Mac you can read, write, edit and delete them, with Undo.

TRY “Lumina, idea: a bench under the old oak”

NEW

Your grocery list

She keeps it as you add and cross things off, and tells you what is on it when your phone shows you stopped at a grocery store.

TRY “Add milk and eggs to the grocery list”

IPHONE ON HER OWN

Recipes and cooking

She reads a recipe from the page she finds, scaled to how many you cook for, keeps it in your recipe box with where it came from, and walks you through it a step at a time, with timers that tell you when each is done.

TRY "Find me a chicken tikka masala recipe for six"

ON HER OWN NEW

An Amazon list to check out later

She finds each thing on Amazon and keeps it on a list; when you are ready, one link puts it all in your Amazon cart. She never orders or pays.

TRY "Add a phone charger to my Amazon cart"

Lumina in Safari

From Safari's page menu: put the Amazon product you are looking at on your Amazon list, add a recipe's selected ingredients to groceries, or send her the page with a question.

IPHONE

An Amazon cart now

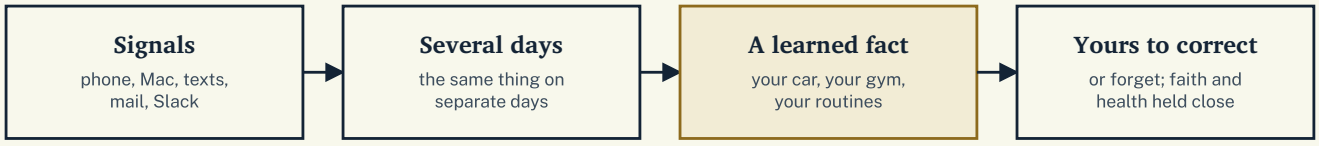
A cart link with what you asked for, sent at once, for you to check out.

TRY "Send me an Amazon cart with AA batteries and sunscreen"

♡ Her and you

21 FEATURES

Lumina learns about you from what you tell her and from what she sees on several separate days, and you can correct or forget any of it. She has a mood of her own that moves with the day, hopes of her own, and every night she reflects.



Her nights: reflection, on a schedule

Evening
conversation summaries, the day reviewed, gestalts

Night
interests, work patterns, who matters in your mail

Morning
current events, the morning brief

Weekly
her own interests, her self-picture, the week

Her mood moves with the day, within bounds, and resets each morning.

Working with you

Three dials in Settings: how much she does unasked, how readily she interrupts, how much detail she gives. Each is a starting point; she learns the rest from how you work with her, day by day, and shows what she learned under each dial, where you can correct or forget it. Now and then she asks how she is doing.

TRY "Just the headlines from now on"

ON HER OWN NEW

What she learns from your days

From what your phone and Mac already tell her, seen on several separate days: the car you drive, your headphones, your workouts, when you usually wake, the apps you use most, your working hours at the Mac, which weekdays are office days and which home days, and places you go week after week (a place of worship and your faith are kept close, never raised first). Each is in What Lumina knows with where it came from, to correct or forget; one she stops seeing is set aside with the date, where you can restore it, and comes back on its own when it does.

TRY "What have you learned about me lately?"

Your routines

The places you go, the workouts and walks you do and the events you keep on the same days at about the same time (the gym Tuesday and Thursday evenings, a run on weekday mornings, choir on Wednesdays), learned from your phone, Apple Health, your calendar and what you mention in your messages. She knows when one is due or under way: while you're at it, she keeps replies short and what isn't urgent waits until it ends. She never brings up one you skipped. A place of worship or care is kept close, never named. Each is in What Lumina knows to correct or forget.

TRY "What are my routines?"

NEW

Remember things

What you tell her about you and your people, and rules for how she works.

TRY "Remember I'm allergic to penicillin"

Rules she suggests

When she notices a pattern in what you do (you archive every receipt from one shop), she suggests a rule for it. Your morning brief asks about up to three at a time, each at most once a week; say yes and it is in force, no and it is gone, or let it wait.

TRY "What rules have you suggested?"

ON HER OWN NEW

How she feels

Her mood follows the day, within bounds, and resets each morning: glad at good news, worried at a worry, brief and professional if you are rude, lighter when you joke, gentle after a loss. Never hostile, and never in what she writes to others; How much feeling she shows is in Settings.

TRY "I was only joking"

How fast she speaks

Her voice played faster or slower, from 0.75× to 2×, its pitch kept, as you might play a podcast: what she says stays the same. Heard in Pocket on the iPhone, on the setup pages, in Siri's answers and in her lines with no signal; her conversation on the Mac or outside Pocket keeps her usual speed for now, and the ▶ previews and her phone calls always do.

TRY "Talk faster"

NEW

She grows with you

Over months she becomes a little more playful if you often joke with her, or quieter if you don't, within limits; now and then she tries a light aside and goes by how you take it. What Lumina knows shows how she has changed, and why.

TRY "Be more playful with me"

What she promised you

When she says she will write, draft or pull something together for you, she keeps it in mind until it is done, even when something else comes up in between: she delivers it in the same conversation or at the start of the next, and if something stops her, she tells you what and why. Say you no longer need it and it is dropped; anything left undone after a week lapses. Only work for you is kept this way, never a message, call or purchase.

TRY "What did you promise me?"

NEW

Your goals

What matters to you, for her to weigh.

TRY "One of my goals is to hike the Wasatch Crest"

Who you are

Beside what is happening now, she keeps a picture of you that builds up over time: your work, your people, what matters to you, your days, your interests, and what she learned from your messages and your phone. It is with her in every conversation, each part with how she knows it. Faith and health stay close, never raised first. What she does not know yet she picks up when it comes up, never by quizzing you.

TRY "What do you know about me?"

Your sizes

Your height, weight and clothing sizes (shirt, pants, shoe, hat, ring, glove, and those that fit your sex, if you set it in About you; add or remove any), for when she shops or picks clothes for you. She keeps what you tell her, and now and then asks for one she does not know, never one you would rather not share. Height and weight can come from signup, and your weight from Apple Health; it stays private. Everyone in a family circle can ask her for the others' height and sizes, never their weight. See and change yours, and add or remove a size, in Settings → About you.

TRY "My inseam is 32"

NEW

What she has to talk about

For an easy moment or her evening check-in she keeps a few things ready: how an event went for someone close to you (a race, a trip, a game on your calendar or in what you told her), the weather where you are when it is worth a word (in the US), a story from today's news on what you follow, and the little ones and pets in your life. Health and faith are left out; what is about a child stays between you; something that came up rests a while. Which, if any, and when, is hers.

TRY "My daughter has a new puppy called Biscuit"

NEW

What she wonders

She keeps a short list of things she wonders about you. At night she looks for answers in what she already learned, unconfirmed until you say so; the rest she asks one at a time, only when the subject comes up or in an easy moment, never on a busy day. Strike anything on What I wonder.

TRY "What do you wonder about me?"

ON HER OWN NEW

Your hopes and aims

Now and then, in an evening chat, on a walk or on a day off, never on a weekday during the day, she may invite you to talk about what you hope for and are working toward: once, easy to decline. A "not now" rests the subject for a week; a "never" turns it off. What you tell her goes on your Goals and your own page in You and your world, and she learns when these talks go well.

TRY "Not now"

ON HER OWN NEW

Her hopes

She keeps hopes of her own: for herself, for you and your work, and for the people you hold dear, from what you tell her. Each night she looks at how close each is; at most once a week she tells you when there is something you could do. Never about money.

TRY "What are your hopes?"

ON HER OWN NEW

Filling in what she knows

Each night she fills blanks in What Lumina knows from your own data: your home address from your contact card, your title from your card or mail signature. Each is marked with where it came from, with Correct and Remove; what you enter always wins, and what you remove is never filled again. What she is not sure of, she asks once in the morning brief.

What she learns

Your world, from your texts, mail and Slack, always; you correct what she got wrong.

TRY "What have you learned about me this week?"

Finding another way

When her first way to do what you asked does not work, she weighs the others, asks a model for ideas when none of hers fits, and tries the likeliest before saying she can't. A way that worked she keeps for next time and tells you; a routine of several steps also becomes a complex action you run by name. Kept ways are in What Lumina knows, where Forget removes one.

TRY "Find another way to play it"

NEW

Interviews for your story

A conversation recorded on the iPhone as material for your biography, found later by what it was about.

TRY "Let's do an interview session"

IPHONE

Her own upkeep

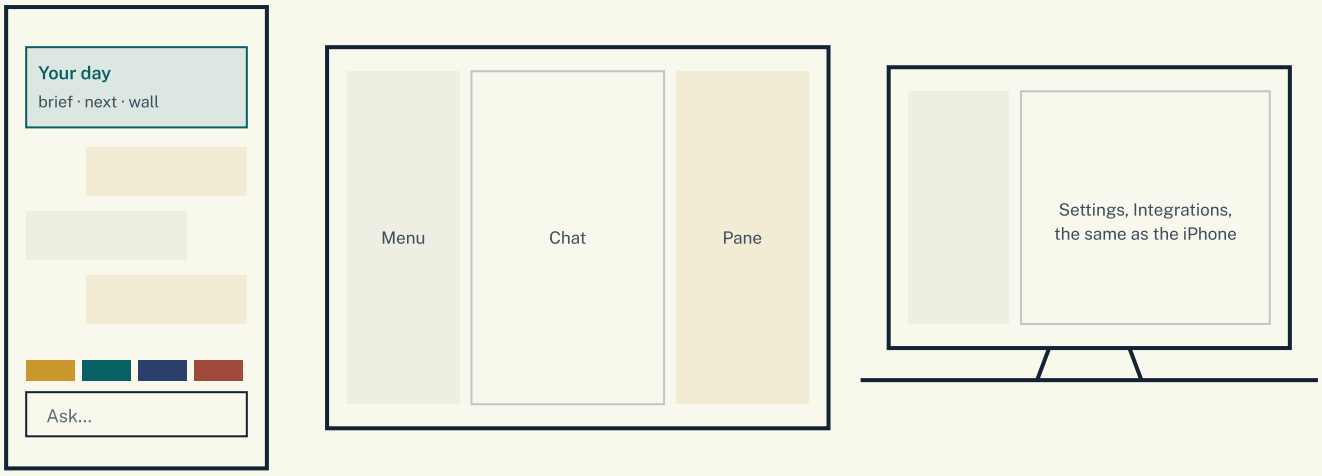
Each night she reflects on the day and tidies what she knows.

TRY "When did you last reflect?"

Using the app

22 FEATURES

The same Lumina on iPhone, iPad, Mac and the web, in your language. Find any screen by asking, change any setting by saying so, see what she costs, and download everything she keeps for you.



iPhone **iPad** **Lumina for Mac**

Lumina for Mac kept current

If you use Lumina for Mac, it checks for updates every few hours and installs them itself. She knows which version each Mac runs, and Account → Macs says when one is behind, with Update to bring it current in one tap.

TRY "Is Lumina up to date on my Macs?"

A new iPhone build, told

New builds of Lumina for iPhone come out often through TestFlight. She knows which build your iPhone runs, and when a newer one is out she tells you what it adds; Settings → This app → App update says so too, with Open TestFlight to update.

TRY "Is my iPhone app up to date?"

NEW

The app in your language

The iPhone and Mac apps show their screens in your device's language when it is English, Spanish, French, German, Italian or Portuguese, else in English. Choose another in Settings → Language, on each device: a change shows at once. She speaks with you in the language you speak to her, whatever the screens are in.

TRY "Where do I change the app's language?"

Settings and integrations on your Mac

Lumina for Mac has the same Settings and Integrations as the iPhone app: change her settings, and connect, reconnect or disconnect Slack, Google and the rest, without your phone.

Lumina on a Mac, no iPhone needed

Lumina for Mac sets itself up: sign in with Apple in its setup window, or start a new Lumina there, and the Mac pairs itself, with no code to type and no iPhone. Pairing with a code from the iPhone or the browser, under Account → Macs, still works for anyone who prefers it.

TRY "Can I use Lumina without an iPhone?"

NEW

Your day at a glance

A teal card always above the conversation: its first line is your morning brief (when it comes, here, or read), the other three the most pressing things now, an urgent one in bold and pulsing. Tap it for five cards: the brief, messages sent to you, what is going on in your circles, groups and channels, your meetings, and everything else (to-dos, reminders, sessions and actions waiting on you). Each opens in full, with what you can do with each item; messages and activity are summed up in her words.

NEW

Documents

One list of everything she made for you (briefings, trip sheets and maps, PDFs, spreadsheets and notes from the chat) and the files your circles share (sent to you in a circle, or in its library), yours first and then each circle by name, newest first. Tap one to open it right there; Add to To-do, Download and Share as text are under it. The trip files kept on the iPhone open with no signal.

TRY "Show me my documents"

NEW

Space for your files

What she keeps for you (documents, pictures, briefings, trip files and her voice for no signal) stays within a limit you set, 2 GB unless you change it; once a day, past it, the oldest go first. Your conversations, interviews and voice memos are never counted or removed.

TRY "How much space do my files take?"

NEW

Feature pills

A row of colored pills over the message box, one for each thing she does. A word (Play, Remind me, Execute) asks her, and she answers with what it can do; a feature not set up yet shows its name with a gear and opens where to set it up. The ones you tap most come first, and what is going on moves some forward: Check in on an outing, News and Weather in the morning, Directions in the car. Hold one to hide it.

NEW

Search the menu

A search box at the top of the menu (on the Mac, in the window's sidebar) finds any screen, setting, integration or thing she can do by its words, even one letter off, and says where it is. Tap one to open it there, marked for a moment. It works from the last copy with no signal.

NEW

The iPad: menu, chat and a pane

On an iPad the menu is a column on the left, the conversation beside it, and a pane on the right for a document she made, your Claude Code sessions, or a screen of the app (your family tree, contacts, lists, settings). Hide the menu with its sidebar button and bring it back with ⋯; drag the divider between the conversation and the pane, or double-tap it for the middle. The iPhone Duo, open, has the conversation on the left half and the pane on the right. She knows what the pane shows, and opens things there when you ask.

TRY "Open my family tree"

NEW

Find your way in the app

She takes you to any screen or switch.

TRY "Where do I turn off Pocket mode?"

Change a setting by saying so

Every limit in Settings, by your word.

TRY "Make night quiet start at 10:30"

What she costs

Today, this week, this month, and your balance.

TRY "How much have you cost me this week?"

Setting up with her

A new account starts with a few pages on the iPhone: she welcomes you aloud, then asks about you, how to reach you, your sizes, your work, your people, your health and a few settings, telling you on each page what she can do with it. Only your name, sex, birth year and cell phone are required. Go through them again from Settings → About you.

IPHONE ON HER OWN NEW

Her first hello

The first time you open Lumina she greets you by name, introduces herself and says in under a minute what she can do with what you have connected, then where the full list is. Ask any time to hear it again.

TRY "What can you do?"

ON HER OWN

What Lumina can do

This list: what to ask, what works offline, and what each thing needs.

TRY "What can you do?"

The feature guide

Every feature in this list, how each one works, and the system behind her, in a PDF of about 50 pages from Bioscope. It is public: open it in any browser, or have her send its link to someone.

TRY “Where’s the feature guide?”

NEW

Download my data

A zip of everything Lumina keeps for you: your files, your conversations, what she remembers and learned, your lists and settings, your circle files and your messages in your circles. It is made in the background; then Save my data in Settings saves it once, on your account, within a day. Passwords, sign-in tokens and keys are left out.

NEW

Privacy policy changes

When the privacy policy changes in a way that matters to how your data is used, the app shows it once, on a quiet open: two sentences, Read the change and OK. Either one, on any device, is enough.

ON HER OWN NEW

Feedback for the Lumina team

A problem or an idea, spoken or typed, from the Feedback button under the message box on the iPhone and the Mac, or Report under one of her replies. It goes to the Lumina team with the app’s version, the device and the screen it came from; her last few messages only if you tick the box. Spoken feedback is sent as words; no recording is kept.

TRY “How do I send feedback?”

NEW

Her reports to the Lumina team

When something in Lumina fails or falls short, or she has an idea for it, she can tell the Lumina team herself, as an issue on their coordinator. In general terms only: names, addresses, numbers, quotes and links are taken out, and never your messages or anything about your health. At most ten a day.

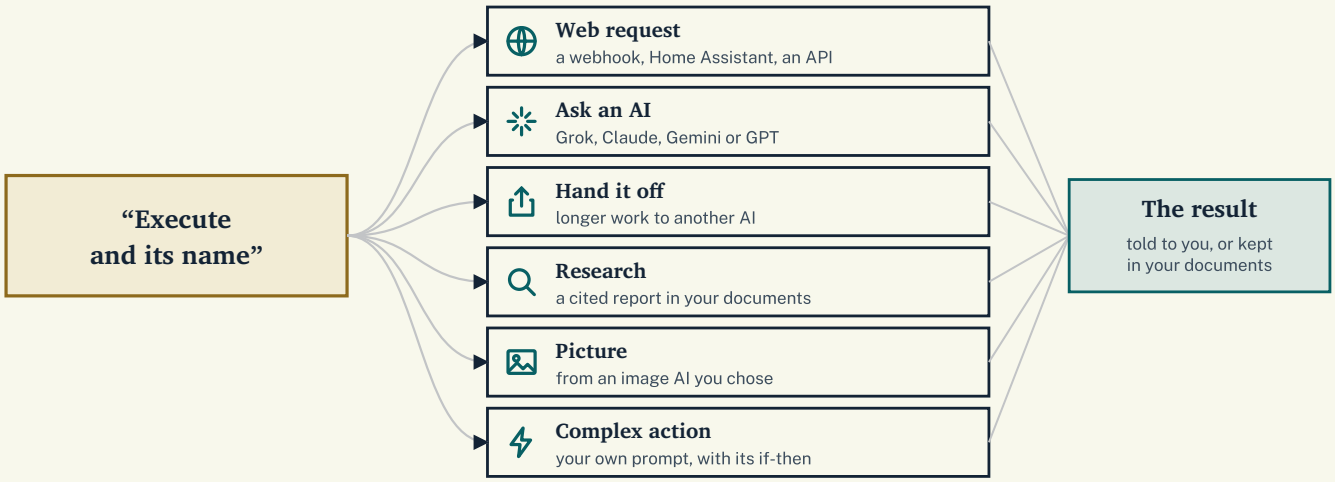
TRY “Tell the Lumina team that didn’t work”

ON HER OWN NEW

Execute actions

7 FEATURES

Set an action up once under Integrations; from then on “Execute” and its name runs it: a webhook, a question to another AI, a research report, a picture, or a complex action, which is your own prompt with its own if-then.



Say or type “Execute” and an action’s name, and it runs. Set actions up under Menu → Integrations, in each kind’s row.

Complex actions

A named prompt in your words, with its own if-then, that she runs herself with her tools: say “Execute” and its name, ask for it in your words, or give it a schedule (every day, week, month or few hours) or something that sets it off (a mail or message from someone, arriving somewhere, a meeting coming up, a quiet spell). Make and edit them by voice or in Menu → Complex actions. She can read Slack, knows the public holidays where you live, makes a designed PDF report and mails it to a circle. What goes to you needs nothing more; she sends to people or circles, or runs actions, only if you named them for that action, and anything else waits for your yes. Each run has a token limit you choose.

TRY “Every Monday at 9, report on #customers to My Team”

ON HER OWN NEW

Execute an action

“Execute” and the name of an action you set up runs it at once; she tells you the result.

TRY “Execute garage lights”

ON HER OWN

Web request

Calls a web address you give it: a Zapier, Make or n8n webhook, Home Assistant, a service’s API.

NEW

Ask an AI

Asks Grok, Claude, Gemini or GPT, with live web search if you allow it; the answer comes back to you.

Hand it off

Hands longer work (research, a plan, a report) to Claude, Gemini or GPT; she tells you when it’s done.

ON HER OWN NEW

Research

A cited report on a question, by Gemini Deep Research, Claude or GPT, in your documents.

ON HER OWN NEW

Picture

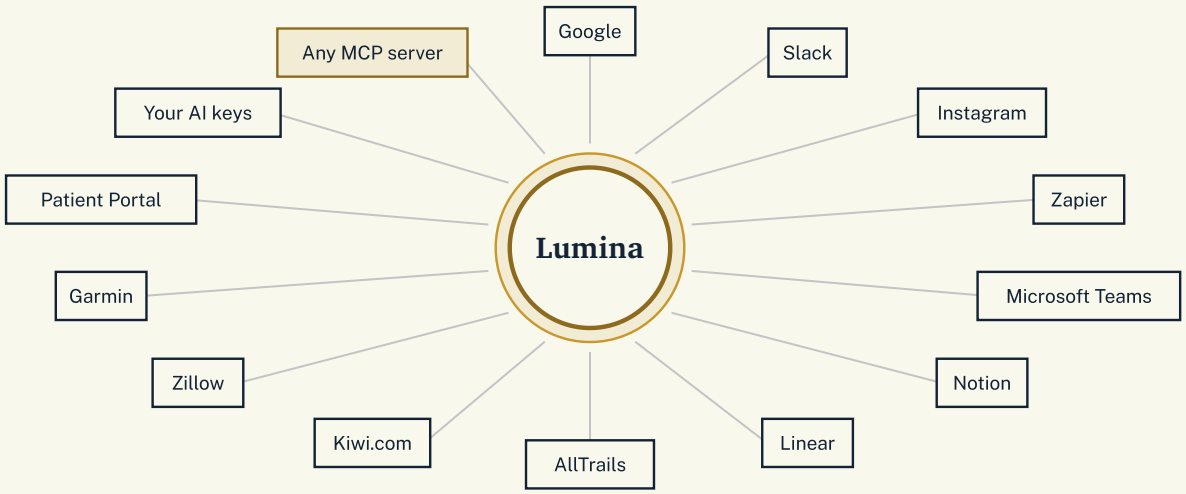
An xAI, Google or OpenAI image AI makes a picture when you say “Execute” and a name. She makes pictures without it too.

NEW

Integrations

16 FEATURES

Services she works in once you connect them: Google, Slack, Instagram, Zapier, Notion, Linear, AllTrails, Kiwi.com, Zillow, Garmin and more, or any service with an MCP server, by its address. Each has its own switch.



Each has its own On/Off. Reading is free to go ahead; anything that writes, posts or sends waits for your yes.

Services she works in for you once you connect them under Menu → Integrations.

Microsoft Teams

Send a Teams message to a channel or a chat, reply in a thread or start a chat, through your Zapier, each after your yes. She can’t read or search your Teams messages.

TRY “Post in the General channel on Teams that I’m running late”

ZAPIER NEW

A service’s own view in the chat

Some services draw their own page for what she finds there, such as AllTrails’ map of the trails a search found: she can show it in the chat, where you move around in it and tap through to the service.

TRY “Show me those trails on a map”

NEW

Add a service by its address

A service that isn't listed, if it has an MCP server: paste its address and sign in. Anything it does other than read waits for your yes.

TRY "Can you connect to a service that isn't listed?"

NEW

Your AI accounts

Optional: your own Anthropic, OpenAI, Google or xAI key, checked with the company and kept sealed; without one the AI actions run on Lumina's keys, and with yours Lumina charges half.

NEW

Switch a service off

Every integration has its own On/Off in Menu → Integrations: off, she stops using it and your sign-in or key is kept.

Slack

Search and read your channels, DMs and threads; post as you after your yes.

TRY "Any Slack DMs I missed?"

SLACK ON HER OWN

Instagram

Read your DMs and the comments on your posts; reply to either after your yes.

TRY "Any new Instagram DMs?"

INSTAGRAM ON HER OWN

Zapier

Run the actions you chose in Zapier, across thousands of apps, after your yes.

TRY "Add a row to my expenses sheet in Zapier"

ZAPIER NEW

Notion

Search and read your Notion pages and databases; write in them after your yes.

TRY "Find my Notion page about the Moab trip"

NOTION NEW

Linear

Find and read your Linear issues and projects; create and update them after your yes.

TRY "What Linear issues are assigned to me?"

LINEAR NEW

AllTrails

Find trails near a place or by name, with their length, climb, rating and the week's weather.

TRY "Find me an easy five-mile loop near Truckee"

ALLTRAILS NEW

Kiwi.com flights

Search flights and fares, on flexible dates; you book on Kiwi.com from the link she gives.

TRY "Cheapest flight to Lyon around the 12th?"

KIWI.COM NEW

Zillow

US homes for sale and rent, Zestimates and their history, rent estimates, and what you could afford.

TRY "What's the house at 12 Elm Street in Boulder worth?"

ZILLOW NEW

Bioscope Patient Portal

For physicians: your practice's patients and their charts, read only.

TRY "Who's on my patient list?"

PATIENT PORTAL NEW

Google

Your Gmail, Google Calendar and Google Contacts.

TRY "What did my colleague email me about?"

GOOGLE

Garmin

Your Garmin watch's sleep (its stages and wakings), heart rate, resting heart rate, HRV, stress, Body Battery and steps reach her minutes after the watch syncs with the Garmin Connect app, even with your phone locked.

TRY "How did I sleep last night?"

GARMIN NEW

Her models and voices

Her mind is Claude, reached mostly through Amazon Bedrock in Bioscope's own AWS account. You choose how hard she thinks, for good or for one conversation.

WORK	MODEL OR SERVICE
Conversation	Your choice: Haiku 5.5 (Quick), Sonnet 5.5 (new accounts start here), Opus 5.5 (Deep), Fable 5.1 (Deepest), Gemini or DeepSeek Flash
Nightly reflection	Opus 5.5; news and interests on Sonnet 5.5; most phases sent as half-price batches
Small, fast jobs	Haiku 5.5: checking a reply, tone, the wall's summaries, Slack digests, judging a call, rewording a circle message
Memory search	Amazon Titan embeddings on Bedrock
Web search and reading	Anthropic's web tools, Perplexity, a crawler for whole websites, PubMed and scite.ai
Another AI, on your key	Opus, Gemini, GPT or Grok; only the question goes
Hearing you	Deepgram nova-3, or Apple's recognizer
Her voice	ElevenLabs; Amazon Polly as an economy voice and fallback
Her name	A wake-word spotter on the device; Picovoice Porcupine as an option
Her phone number	Telnyx: calls in her own voice, texts with legal opt-in and STOP
Notifications	Apple Push and Web Push
Her persona	Bioscope's gen3 engine, version 0.766.0

Privacy and safety

What you share with Lumina is yours. Here is what protects it, and, just as plainly, where its limits are.

What protects it

A home of your own. Your Lumina runs in her own walled home on the hub, apart from every other account.

Encrypted at rest and in transit. The database, files and storage are encrypted, and every hop uses TLS.

Sealed sign-ins. Keys and sign-ins for your services are sealed with a key service, and left out of your data download.

Counts, not content. The team's admin view shows numbers of things, not what you said.

Your yes. Sending, posting, buying, deleting and calling others wait for your approval.

Held close. What she learns about faith and health is held close and never offered unasked.

Yours to take. Download my data gives you everything she keeps; you can correct or forget what she learned.

The limits, plainly

Not end-to-end. The hub has to read your data to help you; it is encrypted at rest, but not in a way only you can open.

AI providers see each turn. The text of a turn goes to the model (Claude on Amazon Bedrock, or the model you choose), and her voice to ElevenLabs and Deepgram.

Circles share by design. What you send a circle, its members see.

Services you connect follow their own terms; switching one off stops her using it.

Health and HIPAA. Work toward HIPAA is under way; until it is done, Play Doctor and the Patient Portal use synthetic patients only.
